

UNITED STATES SECURITIES AND EXCHANGE COMMISSION
WASHINGTON, D.C. 20549

FORM 10-K

☒ ANNUAL REPORT PURSUANT TO SECTION 13 OR 15(d) OF THE SECURITIES
EXCHANGE ACT OF 1934

For the fiscal year ended August 31, 2002

OR

☐ TRANSITION REPORT PURSUANT TO SECTION 13 OR 15(d) OF THE SECURITIES
EXCHANGE ACT OF 1934

For the transition period from _____ to _____.

Commission File Number: 000-30789

ENTEGRIS, INC.

(Exact name of registrant as specified in its charter)

Minnesota

(State or other jurisdiction of
incorporation or organization)

41-1941551

(I.R.S. Employer
Identification Number)

3500 Lyman Boulevard
Chaska, Minnesota 55318

(Address of principal executive offices)

Registrant's telephone number, including area code: (952) 556-3131

Securities registered pursuant to Section 12(b) of the Act: None

Securities registered pursuant to Section 12(g) of the Act:
Common Stock, \$0.01 Par Value

Indicate by check mark whether the registrant (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the registrant was required to file such reports) and (2) has been subject to such filing requirements for the past 90 days. Yes ☒ No ☐

Indicate by check mark if disclosure of delinquent filers pursuant to Item 405 of Regulation S-K is not contained herein, and will not be contained, to the best of registrant's knowledge, in definitive proxy or information statements incorporated by reference in Part III of this Form 10K or any amendment to this Form 10-K. ☐

The aggregate market value of voting stock held by non-affiliates of the registrant, based on the last sale price of the Common Stock on October 31, 2002 as reported by the Nasdaq National Market, was approximately \$305 million. Shares held by each officer and director of the registrant and by each person who owns 5 percent or more of the outstanding Common Shares have been excluded from this computation in that such persons may be deemed to be affiliates of the registrant. This determination of affiliate status for this purpose is not necessarily a conclusive determination for other purposes.

The number of outstanding shares of the registrant's Common Stock, \$0.01 Par Value, as of October 31, 2002 was 71,162,539.

DOCUMENTS INCORPORATED BY REFERENCE

Portions of the Proxy Statement for the 2003 Annual General Meeting of Shareholders (the "Proxy Statement"), to be filed with the Securities and

Exchange Commission pursuant to Regulation 14A within 120 days after the Registrant's fiscal year ended August 31, 2002, are incorporated by reference into Part III of this report. (The Audit Committee Report, the Compensation and Stock Option Committee Report and the stock performance graph of the Registrant's Proxy Statement are expressly not incorporated by reference herein.)

Certain Exhibits filed with the registrant's Registration Statement on Form S-1, No.333-33668 filed with the Commission on July 10, 2000, are incorporated by reference into Part IV of this report.

CAUTIONARY INFORMATION REGARDING FORWARD-LOOKING STATEMENTS

Certain statements contained in this Report on Form 10-K constitute forward-looking statements within the meaning of Section 21E of the Securities Exchange Act of 1934, as amended, and are subject to the safe harbor created by that statute. In some cases, you can identify forward-looking statements by terminology such as "expects," "anticipates," "intends," "may," "should," "plans," "believes," "seeks," "estimates," "could," "would" or the negative of such terms or other comparable terminology. Such forward-looking statements are based upon current expectations and beliefs and involve numerous risks and uncertainties, both known and unknown, that could cause actual events or results to differ materially from these forward-looking statements. For a discussion of factors that could cause actual results to differ materially from those described in this Form 10-K, see the discussion of risk factors set forth below in Item 1 of this report. Although the Company believes that the expectations reflected in the forward-looking statements are reasonable as of the date of this report, it cannot guarantee future results, levels of activity, performance or achievements. The Company undertakes no duty to update any of the forward-looking statements after the date of this report.

PART I

ITEM 1. BUSINESS

Overview

We are a leading provider of materials integrity management solutions to the microelectronics industry, in particular, the semiconductor manufacturing and disk manufacturing markets. In addition, we are providing our materials integrity management solution to the fuel cell and life science markets. However, over 95% of our sales in fiscal 2002 were related to the microelectronics industry. Our materials integrity management solutions for the semiconductor industry assure the integrity of materials as they are handled, stored, processed and transported throughout the semiconductor manufacturing process, from raw silicon wafer manufacturing to packaging of completed integrated circuits. These solutions enable our customers to protect their investment in work-in-process and finished devices by facilitating the safe handling, purity and precision processing of the critical materials used in their manufacturing processes.

With over 10,000 standard and customized products, we believe we provide the most comprehensive portfolio of materials integrity management products to the microelectronics industry. Our materials integrity management products, such as wafer shippers, wafer transport and process carriers, SMIF pods and work-in-process boxes, preserve the integrity of wafers as they are transported from wafer manufacturers to semiconductor manufacturers, processed into finished wafers and integrated circuits and subsequently tested, assembled and packaged. We also provide chemical delivery products, such as valves, fittings, tubing, pipe and containers, that assure the consistent and safe delivery and storage of sophisticated chemicals between chemical manufacturers and semiconductor manufacturers' point-of-use. To complement our product offerings, we offer customized services, such as sub-micron and product cleaning, maintenance and optimization services, product re-use solutions, certification, and repair and maintenance capability for our products and cleaning equipment.

We sell our products worldwide to over 1,000 customers, who represent a broad base of leading suppliers to the microelectronics industry. Our customers in the semiconductor industry include wafer manufacturers, chemical suppliers, equipment manufacturers, device manufacturers and assemblers. Our semiconductor customers

include Amkor/Anam, Applied Materials, Ashland Chemical, IBM, Infineon, Intel, Texas Instruments and TSMC. Our customers in data storage manufacturing include IBM, Komag and Seagate Technology.

International sales represented approximately 48%, 50% and 53% of our sales in fiscal 2000, 2001 and 2002, respectively. We provide our customers with a worldwide network of sales and support personnel, which enable us to offer local service to our global customer base and assure the timely and cost-effective delivery of our products.

Industry Background

Semiconductors, or integrated circuits, are the building blocks of today's electronics and the backbone of the information age. The market for semiconductors has grown significantly over the past decade. This trend is expected to continue due to rapid growth in Internet usage and the continuing demand for applications in data processing, wireless communications, broadband infrastructure, personal computers, handheld electronic devices and other consumer electronics. As integrated circuit performance has increased and the size and cost have decreased, the use of semiconductors in these applications has grown significantly. Despite the fact that, according to the Semiconductor Industry Association, or SIA, worldwide semiconductor revenues declined by 32% to \$139 billion from calendar year 2000 to calendar year 2001 and are expected to rise nominally to \$141 billion in calendar 2002, they are anticipated to grow at a compound annual growth rate of 13% over the next three years to \$206 billion in 2005.

The semiconductor materials industry is comprised of a wide variety of materials and consumables that are used throughout the semiconductor production process. The extensive and complex process of turning bare silicon wafers into finished integrated circuits is dependent upon a variety of materials used repeatedly throughout the manufacturing process, such as silicon, chemicals, gases and metals. The handling of these materials during the integrated circuit manufacturing process requires the use of a variety of products, such as wafer shippers, wafer transport and process carriers, fluid and gas handling components and integrated circuit trays. Semiconductor unit volume is the primary driver of the demand for these materials and products because they are used or consumed throughout the production process and many are replenished or replaced on a regular basis. While influenced by capacity expansion, the semiconductor materials and materials management industries are less cyclical than the semiconductor capital equipment sector.

Semiconductor Manufacturing Process

Semiconductor manufacturing is highly complex and consists of two principal segments: front-end and back-end processes. The front-end process begins with the delivery of raw wafers from wafer manufacturers to semiconductor manufacturers. After the wafers are shipped to semiconductor manufacturers, they are processed into finished wafers. During the front-end process, raw wafers undergo a series of highly complex and sensitive manufacturing steps, during which a variety of materials, including chemicals and gases, are introduced. Once the front-end manufacturing process is completed, finished wafers are transferred to back-end manufacturers or assemblers. The back-end semiconductor manufacturing process consists of test, assembly and packaging of finished wafers into integrated circuits. Materials integrity management products, such as wafer shippers, wafer transport and process carriers, fluid and gas handling components and integrated circuit trays, facilitate the storage, transport, processing and protection of wafers through these front-end and back-end manufacturing steps. Semiconductor manufacturing has become more complex in recent years as new technologies have been introduced to enhance device performance and as larger wafer sizes have been introduced to increase production efficiencies. Increased processing complexity adds significantly to the cost of constructing and equipping a wafer manufacturing facility, or fab, which can now exceed \$3 billion.

As a result of the growing cost and complexity of manufacturing integrated circuits, semiconductor manufacturers have increasingly focused on improving productivity in their manufacturing facilities. In the 1970s, yield management techniques such as process monitoring and in-line testing were introduced to the semiconductor manufacturing process. These techniques were widely adopted in the 1980s and 1990s. Automation was introduced to semiconductor manufacturing facilities in the 1980s in an effort to improve efficiency. Because of the widespread use of these technologies, significant productivity gains have already been realized.

Materials Integrity Management Focus

In an effort to realize continued productivity gains, semiconductor manufacturers have become increasingly focused on materials integrity management solutions that enable them to safely store, handle, process and transport materials throughout the manufacturing process to minimize the potential for damage or degradation to their materials and to protect their investment in processed wafers. Wafer processing can involve as many as 500 steps and take up to six weeks. As a result, a batch of 25 fully processed wafers can have values ranging from approximately \$1.5 million to over \$5 million. Since significant value is added to the wafer during each successive manufacturing step, it is essential that the wafer be handled carefully and precisely to minimize damage. In addition, materials handling products must meet exact specifications each and every time or valuable wafers can be damaged. For example, in the case of wafer carriers, precise wafer positioning, highly reliable and predictable cassette interface dimensions and advanced materials are crucial. The failure to prevent damage to wafers can severely impact integrated circuit performance, render an integrated circuit inoperable or disrupt manufacturing operations. Thus, semiconductor manufacturers are seeking to: minimize contamination (semiconductor processing is now so sensitive that ionic contamination in certain processing chemicals is measured in parts per trillion); protect semiconductor devices from electrostatic discharge and shock; avoid process interruptions; prevent damage or abrasion to wafers and materials during automated processing caused by contact with other materials or equipment; prevent damage due to abrasion or vibration of work-in-process and finished goods during transportation to and from customer and supplier facilities; and eliminate the dangers associated with handling toxic chemicals.

The importance of efficiently managing materials throughout the manufacturing process and the need to protect wafers is demonstrated by the existence of related standards established by the Semiconductor Equipment and Materials International (SEMI) organization, a leading industry trade organization. SEMI has specifically included the need to eliminate these risks in SEMI's official standards publication.

The need for efficient and reliable materials integrity management is particularly important as new materials are introduced and as 300mm semiconductor wafer manufacturing becomes a more prevalent manufacturing technology. Processing 300mm wafers is more costly and more complex because of the larger size of these wafers. In addition, new materials and circuit shrinkage create new contamination and material compatibility risks, rendering 300mm wafers more vulnerable to damage or contamination. These trends will present new and increasingly difficult shipping, transport, process and storage challenges.

The semiconductor materials and the materials integrity management industries are highly fragmented and are served by a variety of providers, consisting of divisions within large corporations and smaller companies that target niche markets or specific geographic regions. Semiconductor manufacturers require materials integrity management providers that demonstrate a deep knowledge of materials integrity management and semiconductor manufacturing, have a track record of reliability, offer a broad product line and have the ability to support and service customer needs worldwide.

Products and Capabilities

We are a leading provider of materials integrity management solutions that assure the integrity of materials as they are handled, stored, processed and transported throughout the semiconductor manufacturing process, from raw silicon wafers to completed integrated circuits. Among other things, our comprehensive portfolio of products enable:

- o secure transport of materials, including chemicals and raw silicon wafers, from suppliers to the fab;
- o storage, handling and transport of wafers throughout fab processing;
- o storage, mixing and distribution of chemicals throughout fab processing;
- o delivery of finished wafers to test, assembly and packaging facilities;

- o safe handling of integrated circuit packages and bare die at the test, assembly and packaging facilities; and
- o optimization of product performance and productivity improvement as a result of customized service offerings for product cleaning, recycling and logistics management.

We also apply our materials integrity expertise within other markets, such as the data storage sector, in the microelectronics industry, as well as the life science and fuel cell markets. Our comprehensive product line, advanced manufacturing capabilities, extensive polymer expertise and worldwide infrastructure provide significant benefits to our customers.

4

Comprehensive Product Line

With over 10,000 products, we believe that we offer the broadest product offering of materials integrity management solutions for the microelectronics manufacturing industry. In the semiconductor industry, we offer products to ship, process, test and store wafers before, during and after the integrated circuit manufacturing process. We also offer a complete product line to transport, process, store and ship chemicals used in the semiconductor manufacturing process. Through the acquisition of NT International and internal development programs, we now have advanced high purity fluid measurement capabilities, including pressure measurement, flow measurement and flow control. In the data storage market, we offer a broad range of products to transport and handle magnetic hard disk drives, read/write heads and optical and compact disks. To complement our product offerings, we provide our customers the ability to outsource their wafer, disk and device handling product cleaning, maintenance, re-use, certification, recycling and product optimization activities.

Advanced Manufacturing Capabilities

We have a wide range of advanced polymer manufacturing capabilities that use a variety of mold designs to produce high precision products, often in cleanroom facilities. Our polymer capabilities include injection molding, rotational molding, blow molding, extrusion, machining, welding and flaring, sheet lining, over-molding, insert molding, prototyping and assembly. These capabilities, coupled with our strengths in advanced tool design and mold-making, high volume manufacturing, quality assurance and polymer reclaiming, enable us to be a leader in our markets.

Extensive Polymer Expertise

We have extensive research experience with the advanced polymer materials used in our products. We have expertise in material evaluation, analytical chemistry, polymer blending and quality assurance techniques. We understand the properties of advanced polymers, how they interact with other materials used in the semiconductor manufacturing process and how they address the varying conditions of the manufacturing process.

Industry and Applications Knowledge

Throughout our 36-year history, we have worked closely with semiconductor and hard disk drive manufacturers and materials suppliers to accumulate considerable insight into the increasingly complex manufacturing requirements of the semiconductor and data storage markets. This insight allows us to more effectively target our research and development toward products that satisfy our customers' manufacturing requirements. Our industry knowledge encompasses contamination control, electrostatic discharge protection, automation interface, and cleanroom manufacturing.

This industry knowledge has enabled us to serve as a leader in developing industry standards. Our ability to characterize and test products allows us to understand the interaction of our products with wafers in our customers' manufacturing process in order to ensure superior performance while reducing the risk of damage.

Worldwide Infrastructure

Our worldwide infrastructure positions us in every major region of the

world where semiconductor manufacturing takes place. Our manufacturing operations and support offices in the United States, Europe and Asia enable us to offer local service, the timely and cost-effective delivery of our products and the capacity to meet standard and unique customer requirements. We offer customer service 24 hours a day, 7 days a week.

Strategy

Our objective is to build upon our leadership in materials integrity management solutions for semiconductor device, equipment and materials suppliers, as well as apply our expertise to the growing materials integrity management needs of other markets. The key elements of our strategy to achieve this objective are:

5

Expand Technological Leadership

Since our inception, we have been an innovator in materials integrity management solutions for the semiconductor industry. For example, our chemical delivery product line represents a number of industry firsts, including: the first perfluoroalkoxy, or PFA, fusion-bonded piping; the first valves with no metal parts in the fluid stream; the first nonmetallic capacitive sensors to successfully perform in harsh environments at high temperatures; the first pinch valve; the first PFA fluid handling product line for biopharmaceutical applications; and the first PFA non-wetted pressure and flow sensors designed specifically for high purity and corrosive applications.

Additionally, we are a leading designer and manufacturer of 300mm materials integrity management solutions with products such as front opening unified pods (FOUPs), and reduced-pitch front opening shipping boxes, or FOSBs. Further, we developed a unique wafer shipper designed to protect and transport extremely delicate thinned wafers, which are used to achieve smaller packages, making smaller size electronic devices possible. We intend to continue to expand the scope of our technology leadership by: identifying and developing viable new polymers for materials integrity management applications, developing innovative product designs and advanced processes for molding difficult materials and aiding the industry in establishing standards for materials integrity management products.

Broaden Product and Service Offerings

Although we offer a comprehensive line of more than 10,000 products, we believe that there is significant potential for sales of new products and solutions in the semiconductor and data storage markets and within the broader microelectronics industry including, among others, new products and solutions for the emerging 300mm wafer market; upgrading 200mm fabs with new and improved products, new products and solutions to store, mix, handle and transport ultra-pure and corrosive chemicals used in the semiconductor manufacturing process; and new products and solutions in the area of testing, storing and shipping finished integrated circuits.

We are committed to developing new products through both internal research and development and strategic acquisitions. For example, during fiscal 2001, we acquired Atcor Corporation and Critical Clean Solutions Inc. (CCS). Atcor, based in San Jose, California, is a leading supplier of precision cleaning systems and cleaning services, providing a variety of cleaning and drying technologies to the world's largest semiconductor and hard disk drive manufacturers. CCS, headquartered in Gilroy, California, is a leading provider of sub-micron cleaning services and reuse products to the semiconductor, disk drive and other high-technology industries.

These acquisitions provided us with the necessary infrastructure for our Silicon Delivery Systems and Services (SDS2) and Disk Delivery Systems and Services (DDS2) programs, which offer outsourced programs for wafer, device and disk transportation and protection. Our WaferCareTM,, DeviceCareTM and DiskCareTM Services include product cleaning, certified re-use services for shipping products, on-site product maintenance and optimization, and end-of-life recycling for our wafer, device and disk-handling products. Re-use services can be customized depending on the customers needs to provide product cleaning, logistics, recovery, certification and supply solutions for our products.

Expand in International Markets

We believe that further penetration of international markets, and specifically, the Japanese market is important to our growth. Four of the world's six largest wafer manufacturers are headquartered in Japan. We have maintained a manufacturing and sales presence in Japan since the 1970s through licensing arrangements, joint venture injection molding operations and a joint venture sales company, which has allowed us to develop strategic relationships and an understanding of the Japanese market. To increase our presence in Japan, we intend to expand our local manufacturing operations, introduce new products, expand our marketing initiatives and pursue strategic acquisitions.

During fiscal 2001, we acquired Tokyo-based Nisso Engineering's fluid handling product line, which expands our portfolio of high quality materials integrity management solutions and supports our commitment to deliver innovative fluid handling solutions to original equipment manufacturers (OEM) in Japan and other locations. In addition, late in the second quarter of fiscal 2002, we purchased the 49% minority interests held in our Fluoroware Valqua Japan K.K. and Nippon Fluoroware K.K. subsidiaries for \$5.2 million.

6

Pursue Selective Acquisitions

Although we currently have no agreements or commitments to acquire any material business, we intend to pursue selective acquisitions to complement our growth. Our goal is to acquire businesses that will strengthen our position in our targeted markets, enhance our technology base, increase our manufacturing capability and our product offerings and expand our geographic presence. Expanding our business in key market segments could strengthen our presence with existing customers and provide access to new customers who seek a global service provider for their materials integrity management needs.

For example, we acquired NT International in fiscal 2001. NT International designs and manufactures patented ultrahigh purity flow and pressure measurement sensors and controllers. These products, coupled with our broad fluid handling product line, enable us to provide customers a complete system solution to protect and transport valuable inventories of critical fluids. It also gives us the ability to offer reliable and highly accurate measurement and control solutions for ultrapure and caustic fluids used in semiconductor manufacturing.

We also acquired Atcor Corporation and Critical Clean Solutions (CCS) in fiscal 2001. Atcor provides a variety of cleaning and drying technologies, and CCS provides sub-micron cleaning services and re-use products to the semiconductor, disk drive and high-technology industries. As a result of these acquisitions, we are now in a position to provide comprehensive wafer handling and disk care through our SDS2 and DDS2 systems.

Expand into New Industries

We believe that our materials integrity management expertise can be applied outside the microelectronics industry to a variety of industries that use sophisticated manufacturing processes and have critical materials integrity management needs. For example, the life science market provides opportunities for our polymer-based fluid handling products and application knowledge. This includes the biopharmaceutical industry, where we are seeking to apply our expertise to live bacteria drug manufacturing, which is a metal-sensitive process enabled by our polymer expertise and products. We are also pursuing other growth opportunities in the chemical processing and medical device markets.

Increase Operational Efficiencies

During the last twelve months we have emphasized increasing manufacturing efficiencies and reducing costs. We have created manufacturing "centers of excellence" around the world and consolidated our manufacturing operations. We estimate that we have reduced our fixed costs by about \$10 million quarterly as a result of this effort. Operational efficiencies will continue to be a focus as we integrate acquisitions and continuously improve our processes.

Markets and Products

With over 10,000 standard and customized products, we believe that we provide the most comprehensive portfolio of materials integrity management solutions to the microelectronics industry. Our product lines address both the semiconductor and the data storage manufacturing markets. During the front-end semiconductor manufacturing process, we provide materials integrity management products and services that preserve the integrity of wafers as they travel from wafer manufacturers to semiconductor manufacturers. As the wafers are subsequently processed, we provide wafer transport products that reliably interface with automated processing equipment. We also provide products that safely deliver processing chemicals from chemical manufacturers in our containers at the fab and then from the containers through our pipes, valves and fittings to process equipment within the fab.

During the back-end semiconductor manufacturing process, we provide products that transport and handle completed integrated circuits during testing, assembly and packaging. Furthermore, we provide products that prevent degradation and damage to magnetic hard disk drives and read/write heads as they are processed and shipped. Through our unique, industry-leading SDS2 and DDS2 offerings, we provide our customers a complete, outsourced solution for wafer, disk and device transportation and protections, which includes programs for sub-micron product cleaning; certified product re-use, including cleaning, recovery and supply logistics; on-site product maintenance and optimization; and end-of-life recycling.

7

In addition to our product offerings, we offer outsourcing services, which provide an opportunity to optimize the use of our products, increase productivity and reduce total costs. We offer five major services:

- o On-site service: our personnel provide sub-micron cleaning, maintenance and optimization services, as well as training on our products, at the customer's site;
- o Sub-micron cleaning: we provide product cleaning and analysis services at our regional service centers, which are located throughout the world;
- o Re-use services: we provide product-customized product re-use solutions for wafer and disk shipping products, including cleaning, certification, collection, logistics and JIT delivery;
- o Recycle services: we provide environmentally sound end-of-life disposition of our products;
- o Field services: we provide repair and maintenance capability for our products and cleaning equipment.

A summary of our materials management product offerings is as follows:

Semiconductor Manufacturing: Front-End

Wafer Manufacturing Products. We are a leading provider of critical shipping products that preserve the integrity of raw silicon wafers as they are transported from wafer manufacturers to semiconductor manufacturers. We lead the market with our extensive, high volume line of UltraPak(R) and CrystalPak(R) products which are supplied to wafer manufacturers in a full range of sizes covering 100, 125, 150 and 200mm wafers. Continuing our technological leadership in the market, we offer the FabFit300(TM) for the transportation and automated interface of 300mm wafers. We offer a complete shipping system, including both wafer shipping containers as well as secondary packaging that provide another level of protection for wafers. This 300mm wafer system reduces the cleaning, shipping and storage costs for semiconductor manufacturers and allows them to optimize the use of their premium cleanroom space.

Wafer Handling Products We believe that we are a market leader in wafer handling products. We offer a wide variety of products that hold and position wafers as they travel between each piece of equipment used in the automated manufacturing process. These specialized carriers provide precise wafer positioning, wafer protection and highly reliable and predictable cassette interfaces in automated fabs. Semiconductor manufacturers rely on our products to improve yields by protecting wafers from abrasion, degradation and contamination during the manufacturing process. We provide standard and customized products that meet the full spectrum of industry standards and customers' wafer handling needs including FOUPs, wafer transport and process carriers, SMIF pods and work-in-process boxes. To meet our customers' varying wafer processing and

transport needs, we offer wafer carriers in a variety of materials and in sizes ranging from 100mm through 300mm.

Cleaning Systems and Services. We believe we are the only company currently offering outsourcing programs for wafer and device transportation and protection for both wafer manufacturing and wafer handling products. Our WaferCare™, and DeviceCare™ services include product cleaning, certified re-use services for shipping products, on-site product maintenance and optimization, and end-of-life recycling for our wafer, device and disk-handling products. Re-use services can be customized depending on the customers needs to provide product cleaning, logistics, recovery, certification and supply solutions for our products.

Chemical Delivery Products. Chemicals spend most of their time in contact with fluid storage and management distribution systems, so it is critical for fluid storage and handling components to resist these chemicals and avoid contributing contaminants to the fluid stream. We offer chemical delivery products that allow the consistent and safe delivery of sophisticated chemicals from the chemical manufacturer to the point-of-use in the semiconductor fab. The products we offer include products that measure and control the pressure and flow of these chemicals in the fab and in the equipment used to make semiconductors. Most of these products are made from perfluoroalkoxy or PFA, a fluoropolymer resin widely used in the industry because of its high purity and inertness to chemicals. The innovative design and reliable performance of our products and systems under the most stringent of process conditions has made us a recognized leader in high purity fluid transfer products and systems. Both semiconductor manufacturers and semiconductor OEMs use our chemical delivery products and systems. Our comprehensive product line provides our customers with a single source provider for their chemical storage and management needs throughout the manufacturing process. Our chemical delivery products include:

- o Valves. We offer the Integra(R), Dymak(R) and Accuflo(TM) valves, each of which were first in their respective applications. Our Integra(R) valve was the first to feature no external metal parts, which can corrode and pose a safety hazard when managing aggressive chemicals. Our Dymak(R) valve is the first PFA pinch valve designed for chemical mechanical polishing, or CMP, slurries, bulk chemical distribution and other high flow applications. The all-PFA

8

pinch element allows greater resistance to chemical corrosion and offers lower particle generation than competing valves. Our Accuflo(TM) metering valve is the first to be molded entirely from PFA, which provides enhanced control for a broad range of applications.

- o Fittings. We provide fittings that have become the industry standard for high purity chemical resistance. We offer three styles of tube fittings: Flaretek(R), Quikgrip(R) and Galtek(R) fittings. Our Flaretek(R) fittings feature a flare design that combines leak-free performance with minimum dead volume. All of the wetted surfaces of our fittings products are Teflon(R) PFA, chosen for its purity and resistance to corrosion in the semiconductor processing environment. Our Quikgrip(R) fitting has a gripper design that features easy, user-friendly assembly. Additionally, our Galtek(R) fittings represent the industry's first all PFA fitting featuring an integral ferrule design for strength along with chemical resistance features.

- o Tubing. We offer three grades of FluoroLine(R) PFA tubing, which address our customers' needs ranging from industrial to ultra high purity applications.

- o Pipe. Our PUREBOND(R) fusable piping components provide leak-free piping systems by fusion bonding over rigid pipe and components. Our patented method for joining PFA components allows flexibility of design and assembly of fluid delivery systems. We offer many component configuration sizes ranging from 1/4 inch to 2 inch inner diameters, meeting a wide range of customer design requirements.

- o Measurement and Control. We offer a wide variety of measurement and control products for high purity and corrosive applications. For electronic measurement and control, we provide a complete line of pressure and flow measurement and control products through our subsidiary, NT International. NT International also handles our patented line of all-plastic capacitance sensors for leak detection, valve position, chemical level and other measurements. We also offer a complete line of sight tube-style flowmeters and mechanical gauge pressure measurement

products.

o Chemical Containers. We offer a broad spectrum of chemical transport and storage containers that help ensure the safe delivery of sophisticated chemicals from chemical manufacturers to the semiconductor manufacturers' point-of-use. Our containers are well suited for the microelectronics industry because they help minimize contamination of chemicals to concentrations of parts per billion and parts per trillion. Our sheet lining process allows us to provide containers for bulk chemical storage and shipment of up to 19,000 liters. We offer a wide variety of container types including drums, pressure vessels, intermediate bulk containers, custom containers and bottles. In addition, we provide our patented quick connect system, which enables safe, risk-free connections for chemical container change-outs.

o Custom Fabricated Products. We offer a wide variety of custom-molded, welded or fabricated fluid products, including custom valves, fittings, filter housings, caps, closures, flanges and tanks. We manufacture these custom products to meet stringent standards of consistency and safety by offering a variety of high performance, chemically resistant materials.

Some of our valves fall within the scope of United States export licensing regulations pertaining to products that could be used in connection with chemical weapons processes. These regulations require us to obtain licenses to ship some of our products to customers in certain countries, and we routinely apply for and obtain export licenses. The applicable export licensing regulations frequently change. Moreover, the types and categories of products that are subject to export licensing are often described in the regulations in general terms and could be subject to differing interpretations. We recently cooperated with the United States Department of Commerce to clarify our licensing practices and to review our practices with respect to prior sales of our valve products to customers in Taiwan and Israel.

Semiconductor Manufacturing: Back-End

Test, Assembly and Packaging Products. Rapidly changing packaging strategies for semiconductor applications are creating new materials management challenges for back-end manufacturers. We offer chip and matrix trays as well as shippers and carriers for thinned wafers, bare die handling and integrated circuits. Our materials management products are compatible with industry standards and available in a wide range of sizes with various feature sets. Our standard trays offer dimensional stability and permanent electrostatic discharge protection. Our trays also offer a number of features including custom designs to minimize die movement and contact; shelves and pedestals to

9

minimize direct die contact, special pocket features to handle various surface finishes to eliminate die sticking; and other features for automated or manual die placement and removal.

In addition, we support our product line with a full range of accessories to address specific needs such as static control, cleaning, chip washing and other related materials management requirements. To better address this market, we have established ictray.com, a website which allows new and existing customers to select from our full range of standard and custom integrated circuit trays.

We recently introduced to the market our Stream(TM) product line, new tape and reel product, which is a packaging system designed to protect and transport microelectronic components, while enabling the high-speed automated placement of the components onto printed circuit boards used for today's electronics.

Hard Disk Drive Manufacturing

Disk Manufacturing Products. Like the semiconductor industry, the data storage market continues to face new challenges and deploy new technologies at an accelerating rate. We provide materials management products and solutions to manage two critical sectors of this industry: magnetic disks and the read/write heads used to read and write today's higher density disks. Because both of these hard disk drive components are instrumental in the transition to more powerful storage solutions, we offer products that carefully protect and maintain the integrity of these components during their processing, storage and shipment. Our product offerings for magnetic hard disk drives include process carriers, boxes,

packages, tools and shippers for aluminum and other disk substrates. Our optical hard disk drive products include stamper cases, process carriers, boxes and glass master carriers. Our read/write head products include transport trays, carriers, handles, boxes, individual disk substrate packages and accessories.

Other Industries

We offer our extensive polymer molding expertise to customers outside the microelectronics industry, such as the biopharmaceutical, medical and telecommunications industries. We work with our customers in these industries to develop specialized components and assemblies that meet their stringent specifications for close tolerances and cleanliness. We offer a wide variety of services and capabilities to these customers, including materials research, parts design, mold design, manufacturing, molding, assembly and final testing.

10

Customers

We have over 1,000 customers in North America, Europe and Asia, including every major semiconductor manufacturer in the world. No single end-customer accounts for over 5% of our sales. We provide products and solutions primarily to semiconductor manufacturers and semiconductor equipment manufacturers, chemical materials suppliers and data storage manufacturers. The following table sets forth a list of major customers in each of the markets in which we operate.

Semiconductor Wafer Manufacturing		Microelectronics and Semiconductor Materials	
MEMC	Sumco	Ashland Chemical	Mykrolis
Shi Etsu Handotai (SEH)	Wacker Siltronic	BOC Edwards	Pall
		EKC Technology	
Semiconductor Device Manufacturing and Assembly			
Agere	Intel	Micron Technology	STATS
AMD	IBM	Motorola	STMicroelectronics
Amkor/Anam	Infineon	NEC	Texas Instruments
Fujitsu	Lucent	Philips	TSMC
Hitachi	LG International	Samsung	UMC
Semiconductor Equipment Manufacturing		Data Storage Manufacturing	
Applied Materials	SCP Global	Fujitsu	MMC Technology
FSI International	Technologies	Hoya	Seagate Technology
		IBM	Toyo Kohan
		Komag	
Custom Products for Other Industries			
ADC Telecom	Guidant		
Boston Scientific	Medtronic		
Ericsson			

Sales and Marketing

We market and sell our products on a worldwide basis through a network of direct sales personnel, commissioned sales representatives and stocking distributors. Our sales and marketing initiatives in Japan are coordinated through the sales office of our wholly-owned subsidiary, Fluoroware Valqua Japan. Metron, a global distributor of semiconductor products and services partially owned by Entegris, has broad distribution rights for the Company's Fluid Handling product line in Europe, and in portions of the United States and Asia. International sales accounted for 53% and 50% of our revenues in fiscal

2002 and fiscal 2001, respectively.

We support our worldwide sales activities by stocking select products in regional warehouses, which facilitates rapid response to customers' needs. For example, Entegris Europe GmbH serves as one of several stocking locations for distribution throughout Europe. The worldwide offices of Metron also carry Fluid Handling product inventories to meet regional demand. Direct customer support comes from our regional service and customer support offices located in the United States, Europe and Asia. We work with each of our regional service and customer support offices to provide regional marketing support, including public relations, collateral development and publication, corporate positioning, advertising, trade show participation and communications. Our marketing groups based in the United States support our global marketing strategy, e-business and other initiatives.

11

Manufacturing

Our customers rely on our products to assure their materials integrity by providing dimensional precision and stability, cleanliness and consistent performance. Our ability to meet our customers' expectations, combined with our substantial investments in worldwide manufacturing capacity, position us to respond to the increasing materials integrity management demands of the microelectronics industry and other industries that require similar levels of materials integrity.

To meet our customer needs worldwide, we have established an extensive global manufacturing network with facilities in the United States, Germany, Japan and Malaysia. Because we work in an industry where contamination control is paramount, we maintain Class 100 to Class 10,000 cleanrooms for manufacturing and assembly. We believe that our worldwide manufacturing operations and our advanced manufacturing capabilities are important competitive advantages. Our advanced manufacturing capabilities include:

- o Injection Molding. Our manufacturing expertise is based on our long experience with injection molding. Using molds produced from computer-aided processes, our manufacturing technicians utilize specialized injection molding equipment and operate within specific protocols and procedures established to consistently produce precision products.
- o Extrusion. Extrusion is accomplished through the use of heat and force from a screw to melt solid polymer pellets in a cylinder and then forcing the resulting melt through a die to produce tubing and pipe. We have established contamination free on-line laser marking and measurement techniques to properly identify products during the extrusion process and ensure consistency in overall dimension and wall thickness.
- o Blow Molding. Blow molding consists of the use of heat and force from a screw to melt solid polymer pellets in a cylinder and then forcing the melt through a die to create a hollow tube. The molten tube is clamped in a mold and expanded with pressurized gas until it takes the shape of the mold. We utilize advanced three-layer processing to manufacture 55 gallon drums, leading to cost savings while simultaneously assuring durability, strength and purity.
- o Rotational Molding. Rotational molding is accomplished by the placing of a solid polymer powder in a mold, placing the mold in an oven and rotating the mold on two axes so that the melting polymer coats the entire surface of the mold. This forms a part in the shape of the mold upon cooling. We use rotational molding in manufacturing containers up to 5,000 liters. Our rotational molding expertise has provided rapid market access for our current fluoropolymer sheet lining manufacturing business.
- o Sheet Lining. Sheet lining consists of welding thin sheets of polymer into a solid lining that conforms to the shape of a large vessel, such as a tanker truck. We sheet line stainless steel tanks up to 19,000 liters in size through a complex adhesive and welding process that provides customers with purity and strength for the high volume

storage and transportation of corrosive chemicals.

- o Machining. Machining consists of the use of computer-controlled equipment to create shapes, such as valve bodies, out of solid polymer blocks or rods. Our computerized machining capabilities enable speed and repeatability in volume manufacturing of our machined products, particularly products utilized in chemical delivery applications.
- o Assembly. We have established protocols, flow charts, work instructions and quality assurance procedures to assure proper assembly of component parts. The extensive use of robotics throughout our facilities reduces labor costs, diminishes the possibility of contamination and assures process consistency.
- o Tool Making. We employ about 80 toolmakers at three separate locations in the United States. Our toolmakers produce the majority of the tools we use throughout the world.

We have made significant investments in systems and equipment to create innovative products and tool designs. Our computer-aided design (CAD) equipment allows us to develop three-dimensional electronic models of desired customer products to guide design and tool-making activities. Our CAD equipment also aids in the rapid prototyping of products.

12

We also use computer-automated engineering in the context of mold flow analysis. Beginning with a three-dimensional CAD model, mold flow analysis is used to visualize and simulate how our molds will fill. The mold flow analysis techniques cut the time needed to bring a new product to market because of the reduced need for sampling and development. Also, our CAD equipment can create a virtual part with specific geometries, which drives subsequent tool design, tool manufacturing, mold flow analysis and performance simulation.

In conjunction with our three-dimensional product designs, we use finite element analysis software to simulate the application of a variety of forces or pressures to observe what will happen during product use. This analysis helps us anticipate forces that affect our products under various conditions. The program also assists our product designers by measuring anticipated stresses against known material strengths and establishing proper margins of safety.

Engineering, Research and Development

We devote a significant portion of our financial and human resources to research and development programs. As of August 31, 2002, we employed approximately 165 people in our worldwide engineering, research and development department. Of these, more than 25 work in our materials and product testing research laboratories, where we conduct general materials research to enhance current products and strengthen our advanced materials knowledge. The other engineering, research and development personnel perform product design and development in response to general market needs as well as specific industry and customer requests. Increasingly, customers ask us to conduct research and development to find materials, products and systems that meet their specific materials handling needs.

We utilize sophisticated methodologies to develop and characterize our materials and products. Our materials technology lab is equipped to analyze the physical, rheological, thermal, chemical and compositional nature of the polymers we use. Our materials lab includes standard and advanced polymer analysis equipment such as inductively coupled plasma mass spectrometry (ICP/MS), inductively coupled plasma atomic emission spectrometry (ICP/AES), Fourier transform infrared spectroscopy (FTIR) and automated thermal desorption gas chromatography/mass spectrometry (ATD-GC/MS). This advanced analysis equipment allows us to detect contaminants in materials that could harm the semiconductor manufacturing process to levels as low as parts per billion, and in many cases parts per trillion.

Our capabilities to test and characterize our materials and products are focused on continuously reducing risk to our customers. The majority of our research is located at our Chaska, Minnesota facilities. We expect that technology and product research and development will continue to represent an important element in our ability to develop and characterize our materials and

products.

13

Facilities

We conduct manufacturing operations in facilities strategically positioned throughout the world. Our factory and warehouse facilities adequately meet our production capacity and work flow requirements. The table below presents certain information relating to these manufacturing and related warehouse facilities.

Manufacturing/ Operations Location	Square Footage	Type of Ownership	Manufacturing Use
United States			
Minnesota	619,000	4 facilities owned, 3 facilities leased	Injection Molding, Extrusion, Blow Molding, Rotational Molding, Tool Making, Micro-molding, Sheet Lining, Assembly, Operations, Warehouse
Colorado	82,000	1 facility owned	Injection Molding, Tool Making
California	114,000	1 facility owned, 2 facilities leased	Custom Manufacturing, Product Cleaning Services, Equipment Assembly
Texas	20,000	1 facility leased	Polymer Reclaiming
Oregon	15,000	1 facility leased	Warehouse
Malaysia	105,000	1 facility owned	Injection Molding
Singapore	15,000	1 facility leased	Cleaning Services
Germany	44,000	1 facility owned	Injection Molding, Extrusion
Japan	48,000	2 facilities owned, 1 facility leased	Injection Molding, Extrusion

Patents and Proprietary Rights

We rely on patent, copyright, trademark and trade secret laws, confidentiality agreements and other contractual arrangements with our employees, strategic partners and others to protect our technology. Our goal is to obtain intellectual property protection to maintain our position as a leader in materials integrity management and to give us a competitive advantage in the industry.

We actively pursue a program of patent applications to seek protection of technologically sensitive features of our materials integrity management products and processes. We conduct extensive research on the patentability of our innovations, the potential infringement on existing patents and the business value of retaining the information as proprietary knowledge. With this information, we determine whether to seek a patent, disclose the information through an industry white paper or maintain the information as a trade secret. As of August 31, 2002, our patent portfolio consisted of 125 current U.S. patents and over 140 patents worldwide. We regularly seek patent protection outside the United States by filing counterpart applications, principally in Europe, Taiwan and Japan. We also pursue trademark registration of our key trademarks in the principal countries where we do business.

The patent position of any manufacturer, including us, is subject to uncertainties and may involve complex legal and factual issues. Litigation may be necessary in the future to enforce our patents and other intellectual property rights or to defend ourselves against claims of infringement or invalidity. The steps that we have taken in seeking patents and other intellectual property protections may prove inadequate to deter misappropriation of our technology and information. In addition, our competitors may independently develop technologies that are substantially equivalent or superior to our technology.

Competition

We face substantial competition from a number of companies, some of which have greater financial, marketing, manufacturing and technical resources. We are not aware of any single competitor who offers a comparable breadth of materials integrity management products and services in the microelectronics industry. We compete on the basis of our technical expertise, product performance, advanced

locations, quality, reliability, established reputation, service and customer relationships. We believe that we compete favorably on the basis of these factors in each of our served markets.

Our wafer management product line faces competition largely on a product-by-product basis. We have historically faced significant competition from companies such as Kakizaki, Dainichi and Asyst Technologies. These companies compete with us primarily in 200mm and 300mm applications. Our chemical delivery products also face worldwide competition from companies such as Saint-Gobain, Parker and Gemu. In assembly, packaging and testing of semiconductor and data storage applications, we compete with companies such as Advantek, GEL-Pak, ITW/Camtex, Peak International and 3M. Primary competition for our wafer shipping containers comes from Japanese companies such as SEP and Kakizaki. In the disk shipping and bare and packaged die tray markets, we face competition from regional suppliers.

Employees

As of August 31, 2002, we had approximately 1,720 full-time employees throughout the world, including 1,095 in manufacturing, 165 in engineering, research and development, including custom product development, and 460 in selling, marketing and general and administrative activities, including customer service, finance and accounting, information technology, human resources and corporate management. Of our full-time employees, approximately 1,290 are located in the United States, about 125 are located in Europe and about 305 are located in Asia. None of our employees is covered by a collective bargaining arrangement. We consider our relationship with our employees to be good.

Legal Proceedings

See Item 3.

Financial Information about Segments and Geographic Areas

See Note 18 to the Consolidated Financial Statements contained under Items 8 and Item 15(a)(1).

RISK FACTORS

Our business faces significant risks. These risks include those described below and may include additional risks and uncertainties not presently known to us or that we currently believe are immaterial. If any of the events or circumstances described in the following risks occurs, our business, operating results or financial condition could be materially adversely affected. These risks should be read in conjunction with the other information set forth in this report. Additional risks and uncertainties not presently known to us or that we currently believe are immaterial also may impair our business operations. If any of the events described in the following risks occur, our business, operating results and financial condition could be significantly harmed.

Industry Risk

The semiconductor industry is highly cyclical, and industry downturns reduce revenue and profits.

Our business depends on the purchasing patterns of semiconductor manufacturers, which, in turn, depend on the current and anticipated demand for semiconductors and products utilizing semiconductors. The semiconductor industry is highly cyclical and historically has experienced periodic downturns, which often have resulted in decreased expenditures by semiconductor manufacturers. These downturns, which occurred most recently in 1996, 1998 and 2001, which continues to the present, have harmed our sales, gross profits and operating results. Furthermore, even in periods of reduced demand, we must continue to maintain a satisfactory level of research and development expenditures and continue to invest in our infrastructure. We expect the semiconductor industry to continue to be cyclical. Any future downturns will reduce revenue and possibly increase pricing pressure, affecting both gross margin and net income.

Our revenue and operating results may fluctuate in future periods.

Our sales and operating results can vary significantly from quarter to quarter. Because our expense levels are relatively fixed in the short-term, an unanticipated decline in revenue in a particular quarter could disproportionately affect our net income in that quarter. In addition, because we typically do not have significant backlog, changes in order patterns have a more immediate impact on our revenues. The 1998 downturn in the semiconductor industry resulted in declines in our net income from fiscal 1997 to fiscal 1998, with a further decline in fiscal 1999. More recently, order rates began to decline rapidly late in the second quarter of 2001. Consequently, we experienced significantly lower sales and earnings in the last half of 2001 and for fiscal 2002. We estimate that sales and earnings in the first quarter of fiscal 2003 will be less than the fourth quarter of fiscal 2002. We anticipate that fluctuations in operating results will continue in the future. Such fluctuations in our results could cause our share price to decline substantially. We believe that period-to-period comparisons of our results of operations may not be meaningful, and you should not rely upon them as indicators of our future performance.

Our industry is subject to rapid technological change, and we may fail to successfully anticipate customer needs and develop new products.

The microelectronics industry is subject to rapid technological change, changing customer requirements and frequent new product introductions. Because of this, the life cycle of our products is difficult to determine. Our future success will depend, to a significant extent, on our ability to keep pace with changes in the market and on our ability to enhance our current products and introduce new products. For example, we must continue to identify new polymers, improve our product design and qualify our products with our customers. We might not successfully develop and introduce new products and materials in a timely and cost-effective manner. Any product enhancements or new products developed by us might not gain market acceptance. In addition, products or technologies developed by competitors could make our products or technologies obsolete or less competitive. If we do not anticipate or respond adequately to technological developments or customer requirements, we could lose market share or miss market opportunities.

International Risks

Continued terrorist attacks, war or other disturbances could lead to further economic instability and decreases in demand for our products and could have a material adverse effect on our operating results and financial condition.

The terrorist attacks of September 11, 2001 caused political and global financial market instability. The long-term effects of the September 11 attacks on our business are unknown. These attacks and the U.S. actions in Afghanistan and the Middle East may lead to additional armed hostilities or to further acts of terrorism and civil disturbance in the U.S. or elsewhere, which may further contribute to economic instability and could have a material adverse effect on our business, financial condition and results of operations.

We face risks from the uncertainty of prevailing economic conditions. Any decrease in customer demand for our products as a result of market downturns could have a material adverse effect on our business, financial condition and results of operations.

During 2001 and 2002, the U.S. and other world markets experienced a significant downturn and many of the markets that we serve were affected. As a result of this downturn, customer demand decreased and our business and financial results were adversely affected. Lower demand also negatively affects our capacity utilization, which could reduce our operating margins. If this economic slowdown were to continue for an extended period or if conditions were to worsen, the negative impact on our business and financial results could be further exacerbated. It is difficult for us to predict if, when or what extent the markets we serve will recover.

We are dependent upon sales outside the United States, and the risks associated with international operations could affect our ability to maintain and increase revenues.

International sales accounted for 48% of our revenues in both fiscal 1999 and fiscal 2000, and 50% of our revenues in fiscal 2001 and approximately 53% of our revenues in fiscal 2002. We anticipate that sales outside the United States will be an increasing percentage of our revenues as we pursue our international growth strategy. A significant portion of our revenues will therefore be subject to risks associated with sales in markets outside the

16

United States, including unexpected changes in legal and regulatory requirements and policy; changes affecting the markets for semiconductor technology; difficulties in managing sales representatives or distributors; difficulties in staffing and managing foreign operations; and difficulties in protecting our intellectual property outside the United States.

The value of the U.S. dollar in relation to other currencies may also harm our sales to customers outside the United States. In fiscal 2002, approximately 17% of our sales revenue was not denominated in U.S. dollars, which exposes us to currency fluctuations. We intend to expand internationally, and to the extent that we do so or change our pricing practices to denominate prices in other currencies, we will be exposed to increased risks of currency fluctuations as well as the increased risks of doing business internationally.

These risks could increase the cost of doing business internationally and could prohibit or hinder our ability to do business in certain countries.

Strained relationships between China and Taiwan may effect our ability to penetrate those markets.

Taiwan accounts for a significant portion of the world's semiconductor manufacturing. Taiwan recently ended its ban on Taiwanese companies building fabs in China, and as a result China is also an emerging market for our products. We currently operate a sales office in Taiwan and intend to use Taiwan as a base to launch operations in China, including a sales office. Our ability to penetrate the emerging market in China will depend heavily on our ability to develop business relationships there. Further, there are currently strained relations between China and Taiwan. Any adverse development in those relations could significantly impact the worldwide production of semiconductors, which would lead to reduced sales of our products.

An increased concentration of wafer manufacturing in Japan could result in lower sales of our wafer management and shipping products.

A large percentage of the world's wafer manufacturing currently takes place in Japan. Our market share in Japan is currently low, and we believe that we must increase our manufacturing capabilities in Japan in order to improve our market share. If we are not able to successfully expand our manufacturing capability and market share in Japan, we might not be able to maintain our global market share in wafer manufacturing and handling products, especially if wafer manufacturing in Japan increases.

Regulatory compliance impacts delivery times and reduces our ability to be competitive in certain countries.

We are subject to federal, state, local and foreign regulations. Compliance with future regulations, including environmental regulations in the United States and abroad, could require us to incur substantial costs. If we do not comply with current or future regulations, directives and standards, we could be subject to fines; our production could be suspended or delivery could be delayed; and we could be prohibited from offering particular products in specified markets.

Certain of our fluid handling products fall within the scope of U.S. export licensing regulations pertaining to products that could be used in connection with chemical weapons processes. These regulations require us to obtain licenses to ship some of our products to customers in certain countries, and we routinely apply for and obtain export licenses. The applicable export licensing regulations frequently change. Moreover, the types and categories of products that are subject to export licensing are often described in the regulations in general terms and could be subject to differing interpretations.

We are dependent on Metron Technology N.V. for a sizable portion of our sales, and a decline in sales by Metron could limit our ability to maintain and grow our revenues.

For the period ended August 31, 2002, we derived 7% of our revenues from customers that purchase our products through Metron Technology N.V., which distributes our fluid handling products in parts of Europe, Asia and the United States. Any negative material event relating to Metron may impact our business. For example, Metron's sales could decline or Metron could choose to sell our competitors' products instead of our products.

In January 2001, Entegris and Metron modified their existing distribution relationship. Under the new agreement, which began in March 2001, Metron will distribute Entegris' Fluid Handling products while we will assume a direct sales responsibility for our Microelectronics products. As part of the agreement our ownership of

17

Metron decreased and stood at approximately 12% at August 31, 2002. We now have less influence on Metron's business and decision making, and Metron may make decisions regarding the conduct of its business that could harm us and over which we have no control.

Relationships with joint venture partners affect our ability to do business internationally.

We may enter into joint venture agreements intended to complement or expand our manufacturing and distribution operations. The success of our joint ventures depends in part on our ability to strengthen our relationships with our joint venture partners. If we do not develop and maintain good relationships with joint venture partners, we will be less able to successfully penetrate international markets.

Economic difficulties in countries in which we sell our products could lead to a decrease in demand for our products.

The volatility of general economic conditions as well as fluctuations in currency exchange and interest rates can lead to decreased demand in countries in which we sell products. For example, in 1997 and 1998, many Asian countries experienced economic and financial difficulties. During this period, our sales to customers in Asia declined. To cite another instance, Japan has been in a prolonged recession, and our sales to customers in Japan have been relatively weak since the second quarter of fiscal 2002. Moreover, any economic, banking or currency difficulties experienced by countries in which we have sales may lead to economic recession in those countries. This in turn could result in a reduction in sales to customers in these countries.

Manufacturing Risks

Our dependence on single and limited source suppliers could affect our ability to manufacture our products.

We rely on single and limited source suppliers for some plastic polymers that are critical to the manufacturing of our products. At times, we have experienced a limited supply of certain polymers as well as the need to substitute polymers, resulting in delays, increased costs and the risks associated with qualifying new polymers with our customers. An industry-wide increase in demand for these polymers could affect the ability of our suppliers to provide sufficient quantities to us. If we are unable to obtain an adequate quantity of such supplies, our manufacturing operations may be interrupted.

In addition, suppliers may discontinue production of polymers specified in certain of our products, requiring us in some instances to certify an alternative with our customers. If we are unable to obtain an adequate quantity of such supplies for any of the above reasons, our manufacturing operations may be effected. Obtaining alternative sources would likely result in increased costs and shipping delays, which could decrease profitability and damage our relationships with current and potential customers.

Prices for polymers can vary widely. We have a long-term contract with a key supplier of polymers that fixes our price for purchases of up to specified

quantities. If our polymer requirements exceed the quantities specified in the contract, we could be exposed to higher material costs. If the cost of polymers increases and we are unable to correspondingly increase the sales price of our products, our profit margins would decline.

Our production processes are becoming increasingly complex, and our production could be disrupted if we are unable to avoid manufacturing difficulties.

Our manufacturing processes are complex and require the use of expensive and technologically sophisticated equipment and materials. These processes are frequently modified to improve manufacturing yields and product quality. We have on occasion experienced manufacturing difficulties, such as temporary shortages of raw materials and occasional critical equipment breakdowns that have delayed deliveries to customers. A number of our product lines are manufactured at only one or two facilities, and any disruption could impact our sales until another facility could commence or expand production of such products.

Our manufacturing operations are subject to numerous risks, including the introduction of impurities in the manufacturing process that could lower manufacturing yields and make our products unmarketable; the costs and demands of managing and coordinating geographically diverse manufacturing facilities; and the disruption of production in one or more facilities as a result of a slowdown or shutdown in another facility.

18

We could experience these or other manufacturing difficulties, which might result in a loss of customers and exposure to product liability claims.

We may lose sales if we are unable to timely procure, repair and replace capital equipment necessary to manufacture many of our products.

Internally designing and producing new complex tools or purchasing additional capital equipment can take several months. If our existing equipment fails, or we are unable to obtain new equipment quickly enough to satisfy any increased demand for our products, we may lose sales to competitors. In particular, we do not maintain duplicate tools for most of our important products. Fixing or replacing complex tools is time consuming, and we may not be able to replace a damaged tool in time to meet customer requirements.

We generally have no written contracts with our customers, which diminishes our ability to plan for future manufacturing needs.

As is typical in our industry, our sales are primarily made on a purchase order basis and we have few written purchase contracts with our customers. Customers may choose to delay or cancel orders. As a result, we cannot predict the level of future sales or commitments from our current customers, which diminishes our ability to effectively allocate labor, materials and equipment in the manufacturing process.

We may not be able to protect our intellectual property, which may limit our ability to compete.

Our success depends in part on our proprietary technology. We attempt to protect our intellectual property rights primarily through patents, trademarks and non-disclosure agreements. However, we might not be able to protect some of our technology, and competitors might be able to develop similar technology independently. In addition, the laws of certain foreign countries might not afford our intellectual property the same protection as do the laws of the United States. The costs of applying for patents in foreign countries and translating the applications into foreign languages require us to select carefully the inventions for which we apply for patent protection and the countries in which we seek such protection. Generally, we have concentrated our efforts on obtaining international patents in countries with competing manufacturers, as well as current and potential customers. Our inability or failure to obtain adequate patent protection in a particular country could harm our ability to compete effectively in that country. Our patents also might not be sufficiently broad to protect our technology, and any existing or future patents might be challenged, invalidated or circumvented. Additionally, our rights under our patents may not provide competitive advantages.

Litigation may be necessary to defend us against claims of intellectual property

infringement, which if successful could cause us to pay significant damage awards or prevent us from manufacturing or selling our products.

Some of our current or future products could infringe patents or proprietary rights of others. Litigation may be necessary to enforce patents issued to us, to protect our trade secrets or know-how, to defend ourselves against claimed infringement of the rights of others or to determine the scope and validity of the proprietary rights of others. Litigation could result in substantial cost and diversion of our efforts. Moreover, an adverse determination in any litigation could cause us to lose proprietary rights, subject us to significant liabilities to third parties, require us to seek licenses or alternative technologies from third parties, or prevent us from manufacturing or selling our products.

Operating Risks

Our move to direct sale of our microelectronic products worldwide involves new risks.

In January 2001, we terminated Metron Technology as distributor for our microelectronic products worldwide, in favor of a direct sales force. We established a global infrastructure team, hired key personnel and commenced direct sales. Although we are no longer dependent on Metron Technology for worldwide sales of our microelectronic products, we are subject to the risks relating to direct sales, including, but not limited to, our ability to retain key personnel and establish customer relationships.

19

At the time we terminated Metron as a distributor of our microelectronics products, we entered into a new agreement with Metron for the continued distribution of our fluid handling products.

If we do not attract and retain key personnel, our production would be disrupted and shipments might be delayed.

Our success depends upon the continued efforts of our senior management team and our technical, manufacturing, marketing and sales personnel. These employees may voluntarily terminate their employment with us at any time. If a significant number of manufacturing personnel were to voluntarily terminate their employment with us, our production would be disrupted and shipments might be delayed.

Competition for such personnel in the technology and semiconductor industries is particularly intense. Recruiting and hiring employees with the combination of skills and attributes required to conduct our business is extremely competitive, time-consuming and expensive. We may not be able to successfully identify, hire and train new manufacturing personnel.

If we fail to identify, complete and successfully integrate future acquisitions, our ability to expand our operations and increase revenues would be harmed.

One of our strategies is to expand by acquiring other technologies, product lines or businesses, including businesses of significant size requiring substantial integration activity. However, we currently have no commitments or agreements with respect to any material acquisition. We might not be able to successfully identify, negotiate or finance any acquisitions, or integrate such acquisitions with our current business, which could diminish our ability to expand our business and remain competitive. Moreover, expansion could require significant management time and resources. Further, we cannot assure you that all acquisitions undertaken by us would produce a positive impact on our operating results.

Competition in the semiconductor materials integrity management industry could intensify as the industry further consolidates, which would limit our ability to maintain and increase our market share and raise prices.

We face substantial competition from a number of companies, some of which have greater financial, marketing, manufacturing and technical resources. Because of an industry trend toward consolidation, larger providers of materials integrity management solutions and products could emerge, with potentially broader product lines. Larger competitors could spend more time and resources on

research and development, which could give those competitors an advantage in meeting customer demand. We expect that existing and new competitors will improve the design of their existing products and will introduce new products with enhanced performance characteristics. The introduction of new products or more efficient production of existing products by our competitors could diminish our market share and increase pricing pressure on our products. Further, customers continue to demand lower prices, shorter delivery times and enhanced product capability. If we do not respond adequately to such pressures, we could lose customers or orders. If we are unable to compete successfully, we could experience pricing pressures, reduced gross margins and order cancellations.

Lack of market acceptance of our 300mm products could harm our operating results.

The growing trend toward the use of 300mm wafers has contributed to the increasing complexity of the semiconductor manufacturing process. The greater diameter of these wafers requires higher tooling costs and presents more complex handling, storage and transportation challenges. We have made substantial investments to complete a full line of 300mm wafer manufacturing and handling product lines, but a protracted industry slow-down has delayed customer implementation of 300mm technology and otherwise allowed competitors to develop products and to pressure pricing of our products. Our customers may not adopt our 300mm wafer manufacturing and handling product lines. If we do not achieve significant penetration of the 300mm market, our growth rate may not remain at the levels it has maintained historically. In addition, if the trend toward 300mm wafer manufacturing does not evolve as we anticipate, sales of our products for these applications would be minimal and we might not recover our development costs.

20

Our management information and financial reporting systems are not fully integrated and need to be upgraded, which will be costly. If these new systems are not successfully implemented, our business may be harmed.

The management information and financial reporting systems that we use in our day-to-day operations are not fully integrated on a worldwide basis. We will need to continue to invest in these systems in order to maintain our current level of business and accommodate any future growth. Our failure to successfully upgrade and integrate our management information and financial reporting systems may disrupt our business, create inefficiencies due to the lack of centralized data, result in unnecessarily high levels of inventories, and increase expenses associated with additional employees to compensate for the lack of fully integrated systems.

We may not be able to significantly expand our customer base by soliciting customers of our competitors because customers tend to standardize materials handling procedures and are reluctant to change their standardized manufacturing processes.

Once an original equipment manufacturer or a microelectronics manufacturer has selected particular materials integrity management products, that manufacturer typically must qualify those products before incorporating them into customized manufacturing procedures that assure precise and consistent processing steps. Qualification and incorporation of materials integrity management products by manufacturers can be time-consuming and expensive. After these procedures have been established, manufacturers are very reluctant to switch to another provider of materials integrity management products. Accordingly, it may be difficult to sell our products to a manufacturer that has already selected a competitor's products.

We may face liability claims that could harm our operating results.

Our products are used by our customers to handle sensitive, complex and valuable wafers and semiconductor materials and devices. If our products fail, these materials could be damaged or contaminated, which could expose us to product liability claims. Business interruption and personal injury claims are also possible in the event of a product failure or misapplication of our product by a customer. In addition, the failure of our chemical delivery products could subject us to environmental liability claims and a failure of our custom medical device components could subject us to personal injury claims. We cannot predict whether our existing insurance coverage limits are adequate to protect us from

any liabilities that we might incur in connection with the manufacture, sale or use of our products. A successful product liability claim or series of product liability claims brought against us could damage our reputation, diminish customer confidence in our products, expose us to increased competition and increase our insurance costs.

We are currently, or in the future, may be exposed to various risks related to legal proceedings or claims.

We currently are, and in the future, may be, involved in legal proceedings or claims regarding patent infringement, intellectual property rights, contracts and other matters. These legal proceedings and claims, whether with or without merit, could be time-consuming and expensive to prosecute or defend, and could divert management's attention and resources. There can be no assurance regarding the outcome of current or future legal proceedings or claims. If we are not able to resolve a claim, negotiate a settlement of the matter, obtain necessary licenses on commercially reasonable terms and/or successfully prosecute or defend its position, our business, financial condition and results of operations could be materially and adversely affected.

Specifically, in September 2002, the Company was named as a defendant along with three companies in an action filed for damages arising from a chemical spill at a customer's facility in January 2000. While the outcome of this matter cannot be predicted with any certainty, based on the information to date, the Company believes that it has adequate insurance to cover any damages assessed against the Company and as such, does not believe that the matter will have a material adverse effect on its financial position, operating results or cash flows.

We may not be able to pursue our expansion strategy if we are unable to raise required funds.

We may need to raise additional capital to acquire or invest in complementary businesses. If we issue additional equity securities, the ownership stakes of our existing shareholders would be reduced, and the new equity securities may have rights, preferences or privileges senior to those of our existing common shares. If we cannot

21

raise funds, if needed, on acceptable terms, we may not be able to develop our business, take advantage of future opportunities, or respond to competitive pressures or unanticipated requirements.

Certain of our long-lived assets have and others may become other than temporarily impaired, including our investment in Metron Technology N.V.

Our investment in Metron Technology N.V. (Metron), has a carrying value on the balance sheet of approximately \$7.6 million. The fair value of Metron is subject to stock market fluctuations. Based on the closing stock price of Metron Technology of \$2.84 per share on August 31, 2002, the fair value of our investment in Metron was approximately \$4.4 million, or \$3.2 million less than the carrying value on our balance sheet. While we determined at August 31, 2002 that our investment in Metron Technology was not other than temporarily impaired, it is possible that an impairment loss could be recorded in connection with our Metron investment depending on a variety of factors.

Because of the volatility of our stock price, the ability to trade Entegris common shares may be adversely affected and our ability to raise capital through future equity financing may be reduced.

Our stock price has been volatile in the past and may continue to be so in the future. In the 2002 fiscal year, for example, our stock price ranged from \$6.60 to \$19.05 per share.

The trading price of our common shares is subject to wide fluctuations in response to various factors, some of which are beyond our control, including factors discussed elsewhere in this report and including the following: the failure to meet the published expectations of securities analysts for a given quarterly period; changes in financial estimates by securities analysts; press releases or announcements by, or changes in market values of, comparable companies; stock market price and volume fluctuations, which are particularly

common among securities of high technology companies; stock market price and volume fluctuations attributable to inconsistent trading volume levels; additions or departures of key personnel; and involvement in or adverse results from litigation.

Changes to financial accounting standards may affect our reported results of operations.

We prepare our financial statements to conform with accounting principles generally accepted in the United States of America ("GAAP"). The GAAP are subject to interpretation by the American Institute of Certified Public Accountants, the Securities and Exchange Commission and various bodies formed to interpret and create appropriate accounting policies. A change in those policies can have a significant effect on our reported results and may even affect our reporting of transactions completed before a change is announced.

Accounting policies affecting many other aspects of our business, including rules relating to purchase accounting for business combinations, revenue recognition, accounting for goodwill and other intangible assets, employee stock purchase plans and stock option grants, have recently been revised or are under review. Changes to those rules or the questioning of our current accounting practices may have a material adverse effect on our reported financial results or on the way we conduct business. In addition, our preparation of financial statements in accordance with GAAP requires that it make estimates and assumptions that affect the recorded amounts of assets and liabilities, disclosure of those assets and liabilities at the date of the financial statement and the recorded amounts of expenses during the reporting period. A change in the facts and circumstances surrounding those estimates could result in a change to our estimates and could impact its future operating results.

We do not intend to pay dividends, and therefore investors must rely solely on the market value of our shares to realize a return on their investment.

We have never declared or paid any cash dividends on our capital shares. In addition, our loan agreements restrict our ability to pay dividends without the consent of our lenders. We currently intend to retain any future earnings to fund the development and growth of our business and, therefore, do not anticipate paying any cash dividends in the foreseeable future.

22

ITEM 2. PROPERTIES

Our corporate headquarter is located in Chaska, Minnesota. The table below presents information relating to our manufacturing and warehousing facilities:

Facility Location	Square Footage	Type of Ownership	Manufacturing Use
United States			
Minnesota	619,000	4 facilities owned, 3 facilities leased	Injection Molding, Extrusion, Blow Molding, Rotational Molding, Tool Making, Micro-molding, Sheet Lining, Assembly, Operations, Warehouse
Colorado	82,000	1 facility owned	Injection Molding, Tool Making
California	114,000	1 facility owned, 2 facilities leased	Custom Manufacturing, Product Cleaning Service, Equipment Assembly
Texas	20,000	1 facility leased	Polymer Reclaiming
Oregon	15,000	1 facility leased	Warehouse
Malaysia	105,000	1 facility owned	Injection Molding
Singapore	15,000	1 facility leased	Product Cleaning Service
Germany	44,000	1 facility owned	Injection Molding, Extrusion
Japan	48,000	2 facilities owned, 1 facility leased	Injection Molding, Extrusion

ITEM 3. LEGAL PROCEEDINGS

In September 2002, the Company was named as a defendant along with three companies in an action filed for damages arising from a chemical spill at a customer's facility in January 2000. While the outcome of this matter cannot be predicted with any certainty, based on the information to date, the Company believes that it has adequate insurance to cover any damages assessed against the Company and as such, does not believe that the matter will have a material adverse effect on its financial position, operating results or cash flows.

In addition, from time to time, the Company is a party to various legal proceedings incidental to its normal operating activities. Although it is impossible to predict the outcome of such proceedings, facts currently available indicate that no such claims will result in losses that would have a material adverse effect on the financial condition, results of operations or cash flows of the Company.

ITEM 4. SUBMISSION OF MATTERS TO VOTE OF SECURITY HOLDERS

No matters were submitted to a vote of shareholders, through the solicitation of proxies or otherwise, during the fourth quarter of the fiscal year covered by this report.

PART II

ITEM 5. MARKET FOR REGISTRANT'S COMMON STOCK AND RELATED STOCKHOLDER MATTERS

The Company's common shares, \$0.01 par value, are traded on the NASDAQ National Market System (NMS) under the symbol "ENTG". The following table sets forth the highest and lowest sale prices at the close of each day, as reported by the NASDAQ-NMS, for the fiscal periods indicated:

	Fiscal 2001		Fiscal 2002	
	High	Low	High	Low
First quarter	\$11.38	\$7.00	\$12.60	\$ 6.60
Second quarter	\$ 9.63	\$6.50	\$12.86	\$ 8.94
Third quarter	\$13.40	\$6.38	\$19.05	\$11.00
Fourth quarter	\$15.60	\$9.65	\$15.12	\$ 8.27

23

There were approximately 238 shareholder accounts of record on October 31, 2002, and the number of beneficial shareholders was estimated to be 6,000.

The Company has never declared or paid cash dividends on its common stock. The Company currently intends to retain all earnings for use in its business, and does not anticipate paying dividends in the foreseeable future.

ITEM 6. SELECTED FINANCIAL DATA

The table that follows presents selected financial data for each of the last six fiscal years from the Company's consolidated financial statements. You should read the following selected consolidated financial data in conjunction with the Company's Consolidated Financial Statements and the related Notes and with "Management's Discussion and Analysis of Financial Condition and Results of Operations" included elsewhere in this Form 10-K Report.

(Amounts in thousands, except per share data)	2002	2001	2000	1999	1998	1997
Operating Results (1)						
Net sales	\$219,831	\$342,444	\$343,465	\$241,952	\$266,591	\$277,290
Gross profit	88,706	162,670	160,442	92,230	109,734	119,238
Operating profit	(3,834)	54,499	72,108	15,325	24,711	38,868
Income before income taxes	(1,395)	60,110	74,631	11,677	17,989	30,015
Net income	2,776	38,616	47,933	5,965	13,130	19,216
Earnings per share outstanding-diluted	0.04	0.53	(0.02)	(2.53)	0.21	0.31

Operating profit	(1.7)%	15.9%	21.0%	6.3%	9.3%	14.0%
Income before income taxes	(0.6)%	17.6%	21.7%	4.8%	6.7%	10.8%
Net income	1.3%	11.3%	14.0%	2.5%	4.9%	6.9%
Effective tax rate	241.8%	35.5%	35.8%	38.7%	25.4%	39.9%
<hr/>						
Cash Flow Statement Data						
Depreciation and amortization	\$28,164	\$24,260	\$27,246	\$28,810	\$26,591	\$23,395
Capital expenditures	19,568	24,331	21,376	10,079	33,512	44,928
<hr/>						
Balance Sheet Data						
Current assets	\$216,735	\$220,037	\$221,414	\$110,279	\$101,155	\$122,761
Current liabilities	39,621	61,253	62,544	58,372	56,567	69,006
Working capital	177,114	158,784	158,870	51,907	44,588	53,755
Current ratio	5.47	3.59	3.54	1.89	1.79	1.78
Total assets	390,260	405,815	353,368	246,978	257,475	213,643
Long-term debt	12,691	13,101	10,822	53,830	73,242	75,971
Shareholders' equity (deficit)	322,114	312,307	266,844	(17,840)	73,304	35,421

- (1) Operating results in fiscal 2002 included a charge of \$4.0 million (\$2.5 million after taxes) in connection with the closure of a facility, the reversal of previous nonrecurring charges of \$2.4 million (\$1.5 million after taxes) and a one-time tax benefit of \$1.4 million. Operating results in fiscal 2001 included two non-recurring charges: a one time charge of \$8.2 million related to the early termination of a distribution agreement for the Microelectronics Group and \$4.9 million charge in connection with its decision to close its Castle Rock, Colorado and Munmak, Korea facilities. Fiscal year 2000 results include an extraordinary loss of \$1.8 million pre-tax (\$1.1 million after taxes) in connection with repayment of \$42 million of long-term debt and capital lease obligations. Fiscal year 2000 results exclude a gain of \$5.5 million (\$3.5 million after taxes) associated with the sale of an investment in an affiliate's common stock. Fiscal year 1999 results exclude a charge of \$4.9 million (\$3.1 million after taxes) associated with merger-related expenses.

24

ITEM 7. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

The information in this Management's Discussion and Analysis of Financial Condition and Results of Operations, except for the historical information, contains forward-looking statements. These statements are subject to risks and uncertainties. You should not place undue reliance on these forward-looking statements as actual results could differ materially. The Company assumes no obligation to publicly release the results of any revision or updates to these forward-looking statements to reflect future events or unanticipated occurrences. This discussion and analysis should be read in conjunction with the Consolidated Financial Statements and the related Notes, which are included elsewhere in this report.

Overview

Entegris, Inc. is a leading provider of materials integrity management products and services that protect and transport the critical materials used in key technology-driven industries. Entegris was incorporated in June 1999 to effect the business combination of Fluoroware, Inc., which began operating in 1966, and EMPAK, Inc., which began operating in 1980. The business combination was accounted for as a pooling of interests. Accordingly, the historical financial statements of Entegris include the historical accounts and results of operations of Fluoroware and EMPAK and their respective subsidiaries, as if the business combination had existed for all periods presented.

Entegris primarily derives its revenue from the sale of products to the semiconductor and data storage industries and generally recognizes sales upon the shipment of such goods to customers. Cost of sales includes polymers and purchased components, manufacturing personnel, supplies and fixed costs related to depreciation and operation of facilities and equipment. The Company's customers consist primarily of semiconductor manufacturers, semiconductor equipment and materials suppliers, and hard disk manufacturers and are served through various subsidiaries and sales and distribution relationships in the United States, Asia and Europe.

The Company's fiscal year is a 52- or 53-week period ending on the last Saturday of August. The last three fiscal years ended on the following dates: August 31, 2002, August 25, 2001 and August 26, 2000. Fiscal 2002 comprises 53 weeks, while fiscal years 2001 and 2000 included 52 weeks. Fiscal years are identified in this report according to the calendar year in which they end. For example, the fiscal year ended August 31, 2002 is alternatively referred to as "fiscal 2002" or "2002".

Critical Accounting Policies

Management's discussion and analysis of financial condition and results of operations are based upon the Company's consolidated financial statements, which have been prepared in accordance with accounting principles generally accepted in the United States. The preparation of these financial statements requires the Company to make estimates, assumptions and judgments that affect the reported amounts of assets, liabilities, revenues and expenses and related disclosure of contingent assets and liabilities. At each balance sheet date, management evaluates its estimates, including, but not limited to, those related to accounts receivable, inventories, long-lived assets, warranty and sales return obligations, and income taxes. The Company bases its estimates on historical experience and on various other assumptions that are believed to be reasonable under the circumstances. Actual results may differ from these estimates under different assumptions or conditions. The critical accounting policies affected significantly by estimates, assumptions and judgments used in the preparation of the Company's financial statements are discussed below.

Allowance for Doubtful Accounts and Other Accounts Receivable-Related Valuation Accounts

The Company maintains an allowance for doubtful accounts as well as reserves for sales returns and allowances, and warranty claims. Significant management judgments and estimates must be made and used in connection with establishing these valuation accounts. Material differences could result in the amount and timing of the Company's results of operations for any period if we made different judgments or utilized different estimates. In addition, actual results could be different from the Company's current estimates, possibly resulting in increased future charges to earnings.

The Company provides an allowance for doubtful accounts for all individual receivables judged to be unlikely for collection. For all other accounts receivable, the Company records an allowance for doubtful accounts based on a combination of factors. Specifically, management analyzes the age of receivable balances, historical bad debts write-off experience, customer concentrations, general customer creditworthiness and current economic trends when

25

determining its allowance for doubtful accounts. At August 31, 2002 and August 25, 2001, the Company's allowance for doubtful accounts was \$1.8 million and \$1.6 million, respectively.

A reserve for sales returns and allowances is established based on historical trends and current trends in product returns. At August 31, 2002 and August 25, 2001, the Company's reserve for sales returns and allowances was \$1.2 million and \$1.9 million, respectively.

The Company records a liability for estimated warranty claims. The amount of the accrual is based on historical claims data by product group and other factors. Claims could be materially different from actual results for a variety of reasons, including a change in the Company's warranty policy in response to industry trends, competition or other external forces, manufacturing changes that could impact product quality, or as yet unrecognized defects in products sold. At August 31, 2002 and August 25, 2001, the Company's accrual for estimated future warranty costs was \$0.7 million and \$1.0 million, respectively.

Inventory Valuation The Company uses certain estimates and judgments to properly value inventory. In general, the Company's inventories are recorded at the lower of standard manufacturing cost or market value. Each quarter, the Company evaluates its ending inventories for obsolescence and excess quantities. This evaluation includes analyses of inventory levels, historical loss trends, expected product lives, sales levels by product and projections of future sales

demand. Inventories that are considered obsolete are written off. In addition, reserves are established for inventory quantities in excess of forecasted demand. At August 31, 2002 and August 25, 2001, inventory reserves were \$5.8 million and \$5.8 million, respectively.

The Company's inventories comprise materials and products subject to technological obsolescence and which are sold in a highly competitive industry. If future demand or market conditions are less favorable than current analyses, additional inventory write-downs or reserves may be required and would be reflected in cost of sales in the period the revision is made.

Impairment of Long-Lived Assets The Company routinely considers whether indicators of impairment of its property and equipment assets, particularly its molding equipment, are present. If such indicators are present, it is determined whether the sum of the estimated undiscounted cash flows attributable to the assets in question is less than their carrying value. If less, an impairment loss is recognized based on the excess of the carrying amount of the assets over their respective fair values. Fair value is determined by discounted estimated future cash flows, appraisals or other methods deemed appropriate. If the assets determined to be impaired are to be held and used, the Company recognizes an impairment charge to the extent the present value of anticipated net cash flows attributable to the asset are less than the asset's carrying value. The fair value of the asset then becomes the asset's new carrying value, which we depreciate over the remaining estimated useful life of the asset.

The Company assesses the impairment of intangible assets and related goodwill at least annually, or whenever events or changes in circumstances indicate that the carrying value may not be recoverable. Factors considered important which could trigger an impairment review, and potentially an impairment charge, include the following:

- o significant underperformance relative to historical or projected future operating results;
- o significant changes in the manner of use of the acquired assets or the Company's overall business strategy;
- o significant negative industry or economic trends; and
- o significant decline in the Company's stock price for a sustained period changing the Company's market capitalization relative to its net book value;

The Company's marketable equity securities are periodically reviewed to determine if declines in fair value below cost basis are other-than-temporary. At August 31, 2002, the Company's investment in Metron Technology N.V. had a carrying value of \$7.6 million with a fair value of \$4.2 million. If the decline in fair value is determined to be other-than-temporary, an impairment loss will be recorded and the investment written down to a new cost basis.

Income Taxes In the preparation of the Company's consolidated financial statements, management is required to estimate income taxes in each of the jurisdictions in which the Company operates. This process involves estimating actual current tax exposures together with assessing temporary differences resulting from differing treatment of items for tax and accounting purposes. These differences result in deferred tax assets and liabilities, which are included in the Company's consolidated balance sheet.

26

The Company has significant amounts of deferred tax assets that are reviewed for recoverability and valued accordingly. Management evaluates the realizability of the deferred tax assets on a quarterly basis and assesses the need for valuation allowances. These deferred tax assets are evaluated by considering historical levels of income, estimates of future taxable income streams and the impact of tax planning strategies. A valuation allowance is recorded to reduce deferred tax assets when it is determined that the Company would not be able to realize all or part of its deferred tax assets. At August 31, 2002, the Company carried a valuation allowance of \$1.4 million against its net deferred tax assets with respect to certain foreign net operating loss carryforwards.

Results of Operations

The following table sets forth the relationship between various components of operations, stated as a percent of net sales, for fiscal year 2002, 2001 and

2000. The Company's historical financial data were derived from its audited consolidated financial statements and related notes included elsewhere in this annual report.

	Percent of Net Sales		
	2002	2001	2000
Net sales	100.0%	100.0%	100.0%
Cost of sales	59.6	52.5	53.3
Gross profit	40.4	47.5	46.7
Selling, general and administrative expenses	33.5	22.9	21.3
Engineering, research and development expenses	7.9	4.8	4.4
Nonrecurring charges	0.7	3.8	--
Operating (loss) profit	(1.7)	15.9	21.0
Interest (income) expense, net	(0.7)	(1.3)	0.7
Other income, net	(0.4)	(0.3)	(1.4)
(Loss) income before income taxes and other items below	(0.6)	17.6	21.7
Income tax expense (benefit)	(1.5)	6.2	7.8
Equity in net income of affiliates	--	(0.4)	(0.5)
Minority interest	(0.4)	0.5	0.1
Income before extraordinary item	1.3	11.3	14.3
Extraordinary loss on extinguishment of debt, net of taxes	--	--	(0.3)
Net income	1.3	11.3	14.0

Fiscal 2002 Compared to Fiscal 2001

Net sales. Net sales were \$219.8 in fiscal 2002, down 36% from \$342.4 million in fiscal 2001. The decline reflected the continuation of weakened business conditions in the semiconductor industry that began in the second half of fiscal 2001, as the semiconductor industry experienced unprecedented deterioration in market conditions, with rapidly falling rates of factory utilization and reduced capital spending. The sales decrease was attributable to softer demand for both fluid handling products, which generally depend on capital spending levels, and microelectronics products, which also depend on the manufacturing utilization of semiconductor industry. Although the Company reported sequentially higher quarterly sales as fiscal 2002 progressed, fourth quarter revenues were still significantly below the record levels experienced in the first half of 2001.

Fiscal 2002 sales for the Microelectronics Group were down 28% from fiscal 2001 and accounted for about 76% of Entegris sales. Fluid Handling sales in 2002 were down 52% from a year ago, making up 24% of total sales.

Revenue declines were recorded in all geographic regions, with approximately 40% year-to-year declines experienced for North America, Europe and Japan, while sales to the Asia Pacific region fell just 13%, which reflects a nominal decrease of Microelectronics Group product sales to that region. Overall, international sales accounted for approximately 53% of net sales in fiscal 2002, up from 50% in fiscal 2001. Fiscal 2002 sales were 47% to North America, 21% to Asia Pacific, 16% to Europe and 16% to Japan.

Based on current order rates, industry analyst expectations and other information, the Company expects that sales for the first quarter of fiscal 2003 will be approximately 20% lower than sales levels experienced in the fourth quarter of fiscal 2002. However, industry volatility and uncertain global market conditions make it difficult to forecast for future quarters.

Gross profit. Gross profit in fiscal 2002 decreased 45% to \$88.7 million, compared to \$162.7 million in fiscal 2001. The Company's gross margin for fiscal 2002 was 40.4% compared to 47.5% for fiscal 2001. Gross margin and gross profit declines were reported by both domestic and international operations. The drop in fiscal 2002 figures was primarily caused by the lower sales levels noted

above, which resulted in lower factory utilization. Gross profit levels generally improved throughout the year as sales increased sequentially by quarter.

Partly offsetting the declines was the benefit of the Company's actions in reducing costs and increasing manufacturing efficiencies associated with the closure of manufacturing plants, investing in automation, changing process flows and instituting manufacturing Centers of Excellence. The Company also recorded lower asset impairment charges in 2002, incurring charges of \$1.1 million and \$3.5 million in 2002 and 2001, respectively, mainly for asset write-offs of molds.

As discussed above, the Company cannot provide guidance about fiscal 2003 sales levels. However, in general, gross profit and gross margin variances mainly track the utilization of the Company's production capacity associated with varying sales levels.

Selling, general and administrative expenses (SG&A). SG&A expenses decreased \$4.9 million, or 6%, to \$73.6 million in fiscal 2002 from \$78.5 million in fiscal 2001. The decline is primarily due to significantly lower incentive compensation and charitable contribution accruals, which are based on the Company's results of operations, offset partly by increased expenditures for information systems and the continued building of the Company's global infrastructure which began in fiscal 2001. SG&A costs, as a percent of net sales, increased to 33.5% from 22.9% with the impact of lower SG&A expenses more than offset by the effect of lower net sales.

Nonrecurring charges (reversals). In the first quarter of 2002, the Company's results included a nonrecurring charge of \$4.0 million in connection with the closures of the Company's Chanhassen, MN plant. The charge included \$1.5 million in termination costs related to a workforce reduction of 230 employees and \$2.3 million for estimated losses for asset impairment.

The Company recorded pre-tax benefits of \$1.6 million and \$0.8 million in the third quarter and fourth quarters of 2002, respectively, associated with the reversal of previous accruals related to plant closures in 2002 and 2001. Approximately \$1.0 million of the reversals was associated with the favorable settlement of future lease commitments on the Castle Rock facility, for which the Company had recorded accruals in 2001. Lower than expected impairment costs accounted for approximately \$1.2 million of the reversals.

Operating results in fiscal 2001 included two nonrecurring charges. In fiscal 2001, the Company recorded a charge of \$8.2 million related to the early termination of a distribution agreement and a \$4.9 million charge in connection with the closing of its Castle Rock, Colorado and Munmak, Korea facilities. Both charges are described in greater detail below.

As of August 31, 2002, \$0.2 million remained outstanding in connection with the aforementioned nonrecurring charges

Engineering, research and development expenses (ER&D). ER&D expenses increased 5% to \$17.4 million, or 7.9% of net sales, in fiscal 2002 as compared to \$16.5 million, or 4.8% of net sales, in fiscal 2001. In fiscal 2002, the Company's expenditures were focused on supporting current product lines, developing new manufacturing technologies and developing next generation products for new and existing markets.

Interest (income) expense, net. The Company reported net interest income of \$1.5 million in fiscal 2002 compared to \$4.5 million in fiscal 2001. The change reflects the significantly lower rates of interest earned on cash equivalents and short-term investments and a shift in the mix of such investments towards tax-exempt debt securities.

Other income, net. Other income was \$1.0 million in fiscal 2002 compared to \$1.1 million in fiscal 2001. Other income in fiscal 2002 consisted primarily of the foreign currency gains, with about \$0.7 million associated with the realization of translation gains from the liquidation of the Company's Korean entity, while other income in fiscal 2001 included foreign currency translation gains offset by losses on sales of property and equipment.

Income tax expense (benefit). The Company recorded an income tax benefit of \$3.4 million for fiscal 2002 compared to income tax expense of \$21.3 million in fiscal 2001. The effective tax rate for fiscal 2002 was 241.8%

compared to 35.5% in fiscal 2001. The variance primarily reflects the significant difference in the Company's pre-tax operating results. The income tax benefit in fiscal 2002 includes a one-time benefit of \$1.4 million related to the repatriation of earnings from certain non-U.S. subsidiaries, while income tax expense in fiscal 2001 includes a \$1.6 million tax benefit associated with the closure of the Company's Korean manufacturing operations, losses of which were previously non-deductible. The Company expects an effective tax rate of about 38% in fiscal 2003.

Equity in net income of affiliates. The Company recorded no equity in the net income of affiliates in fiscal 2002 compared to \$1.5 million in fiscal 2001, all of which was recorded in the first half of that fiscal year. This reflects the change in accounting for the Company's investment in Metron Technology N.V. (Metron), which was recorded under the equity method of accounting through the second quarter of fiscal 2001 at which time the Company began accounting for its remaining investment as an available-for-sale equity security, as our percentage ownership in Metron was reduced from 20% to 12%.

Minority interest. For fiscal 2002, the minority interest in subsidiaries' net loss was \$0.8 million, reflecting the operating losses of the Company's formerly 51%-owned Japanese subsidiaries in the first half of the year. The company purchased the 49% minority interests in these entities in February 2002. This compares to minority interest in subsidiaries' net income of \$1.6 million for fiscal 2001.

Net income. Net income decreased to \$2.8 million, or \$0.04 per share diluted, in fiscal 2002, compared to net income of \$38.6 million, or \$0.53 per share diluted, in fiscal 2001. Excluding the effects of nonrecurring charges and reversals in fiscal 2002 and 2001, pro forma diluted earnings per share declined to \$0.03 from \$0.62 per share in 2001.

Fiscal 2001 Compared to Fiscal 2000

Net sales. Net sales were \$342.4 million in fiscal 2001, flat when compared to \$343.5 million in fiscal 2000. The Company reported record sales in the first half of 2001, reflecting a continuation of strong business conditions in the semiconductor industry that began in the second half of 1999. However, incoming order rates began to decline rapidly late in the second quarter of 2001 for both fluid handling products, which are dependent on capital spending levels in the semiconductor industry, and microelectronics products, reflecting declining manufacturing utilization of wafer manufacturers and semiconductor manufacturers. Consequently, the Company experienced significantly lower sales over the last half of the year, resulting in level sales with 2000. Falling order rates began to stabilize during the fourth quarter of fiscal 2001.

Increased sales in Japan offset revenue declines in the North America and Asia Pacific regions, with European sales unchanged from one year ago. Overall, international sales accounted for approximately 50% of net sales in fiscal 2001, up from 48% in fiscal 2000. Sales of fluid handling products, which made up 33% of total sales, grew by 5%, while microelectronics product sales, 67% of total sales, fell slightly.

Gross profit. Gross profit in fiscal 2001 increased to \$162.7 million, a small increase over the \$160.4 million reported in fiscal 2000. The minor improvement in fiscal 2001 partly reflect the benefit of integrating various elements of the Company's manufacturing operations. Asset impairment charges of \$3.5 million and \$5.9 million were recorded in 2001 and 2000, respectively, mainly for asset write-offs of molds.

Gross margin for fiscal 2001 improved to 47.5% compared to 46.7% for fiscal 2000. Gross profit and gross margin variances mainly track the utilization of the Company's production capacity associated with varying sales levels. Consequently, the Company reported improved gross profits and gross margins in excess of 50% during the first half of 2001, but experienced declining gross profits and lower gross margins over the latter half of the year.

Selling, general and administrative expenses. Selling, general and administrative (SG&A) expenses increased \$5.2 million, or 7%, to \$78.5 million in fiscal 2001 from \$73.3 million in fiscal 2000. SG&A costs, as a percent of net sales, increased to 22.9% from 21.3%. The year-to-year increase is due to the cost of building the Company's global infrastructure including the addition

of direct sales forces in Europe and Asia, as well as the SG&A expenses from acquired businesses. Fiscal 2001 also includes higher expenditures for information systems.

Nonrecurring charges. Operating results in fiscal 2001 include two nonrecurring charges. During the second quarter, the Company recorded a charge of \$8.2 million related to the early termination of a distribution agreement for the Microelectronics Group with its affiliate, Metron Technology N.V. (Metron). Pursuant to the termination agreement, the Company assumed direct sales responsibility for the Microelectronics Group product sales in Europe

29

and Asia, and transferred to Metron 1.125 million shares of Metron stock and agreed to make future cash payments totaling \$1.75 million. Entegris also agreed to buy back certain microelectronics product inventory from Metron. The Company and Metron also executed a new distribution agreement for Entegris' Fluid Handling Group products, which now runs through August 31, 2005.

During the third quarter, the Company recorded a \$4.9 million charge in connection with the closing of its Castle Rock, Colorado and Munmak, Korea facilities. The charge includes \$1.7 million in termination costs related to a workforce reduction of 170 employees and \$1.4 million for estimated losses for asset disposals. In addition, the charge includes \$1.8 million for future lease commitments on the Castle Rock facility, the lessor of which is a major shareholder of the Company.

Engineering, research and development expenses (ER&D). ER&D expenses increased to \$16.5 million in fiscal 2001, up 10% from \$15.0 million in 2000. ER&D expense, as a percent of net sales, rose to 4.8% in 2001 from 4.4% in fiscal 2000. A major element of fiscal 2001 ER&D costs relates to the continued development of next generation 300mm products.

Interest (income) expense, net. The Company reported net interest income of \$4.5 million in fiscal 2001 compared to net interest expense of \$2.4 million in fiscal 2000. The variance relates to interest earnings on invested cash generated from operations and the receipt of net proceeds of \$99.0 million from the Company's initial public offering in the fourth quarter of fiscal 2000, \$42 million of which was used to retire long-term debt and capital lease obligations.

Other income, net. Other income was \$1.1 million in fiscal 2001 compared to \$4.9 million in fiscal 2000. The decrease was primarily due to the absence of the \$5.5 million gain recognized in fiscal 2000 on the sale of approximately 612,000 shares of the Company's investment in Metron. Other income in fiscal 2001 included foreign currency translation gains offset by losses on sales of property and equipment.

Income tax expense. Income tax expense was \$21.3 million in fiscal 2001 compared to \$26.8 million in fiscal 2000, primarily reflecting lower pre-tax income. The effective tax rate for 2001 was 35.5% compared to 35.8% in 2000. The effective rate in 2001 included a \$1.6 million tax benefit associated with the closure of the Korea operation, losses of which were previously non-deductible.

Equity in net income of affiliates. During March 2001, the Company surrendered ownership of 1.125 million shares of its investment in Metron in connection with the charge described above under the caption "Nonrecurring charges". As a result, the Company's percentage ownership in Metron decreased to approximately 12%. The Company discontinued application of the equity method to account for its investment in Metron and accounts for its remaining investment as an available-for-sale security under the provisions of Statement of Financial Accounting Standards (SFAS) No. 115 - Accounting for Certain Investments in Debt and Equity Securities. Therefore, the Company recorded no equity in the net income of affiliates in the third or fourth quarters of fiscal 2001. For the first six months of 2001, the Company recorded equity in the net income of affiliates of \$1.5 million in 2001 compared to \$1.7 million for all of 2000.

Minority interest. For fiscal 2001, minority interest in subsidiaries' net income more than tripled to \$1.6 million compared to fiscal 2000. This figure reflects the improved financial performance at Entegris' 51%-owned Japanese subsidiaries (wholly-owned as of February 2002).

Net income. Net income decreased to \$38.6 million in fiscal 2001, compared to net income of \$47.9 million in fiscal 2000. After the market value adjustment related to redeemable common stock, net income applicable to nonredeemable common shareholders was \$38.6 million, or \$0.53 per share diluted, in fiscal 2001, compared to a net loss of \$0.7 million, or a loss of \$0.02 per share diluted, in fiscal 2000. Excluding the effects of the market value adjustment related to redeemable common stock, nonrecurring charges in fiscal 2001 and the fiscal 2000 gain on the sale of an affiliate's common stock, pro forma earnings per share declined to \$0.62 per share in 2001 from \$0.68 in 2000.

30

Quarterly Results of Operations

The table below presents selected data from the Company's consolidated statements of operations for the eight quarters ended August 31, 2002. This unaudited information has been prepared on the same basis as the audited consolidated financial statements appearing elsewhere in this annual report. All adjustments which management considers necessary for the fair presentation of the unaudited information have been included in the quarters presented.

From mid-1999 through the second quarter of fiscal 2001, the Company reported steadily improving net sales, primarily resulting from improved market conditions in the semiconductor industry. As sales grew, gross profits and margins improved principally due to improved utilization of production capacity, and often a more favorable product sales mix. During the last two quarters of fiscal 2001 and through fiscal 2002, the Company's sales levels fell to well below those reported in the first half of 2001, reflecting the downturn in the global semiconductor industry, including significant cutbacks in industry capital spending. Quarterly sales levels improved sequentially through fiscal 2002, but were still nearly 40% lower than sales experienced in the first half of 2001. Consequently, the Company experienced lower utilization in its manufacturing operations, leading to generally lower gross profits and earnings in 2002.

Net income in the second quarter of fiscal 2001 includes a pretax charge of \$8.2 million related to the termination of a distribution agreement. Net income in the third quarter of 2001 includes a \$4.9 million pretax charge in connection with the closure of two facilities.

In the first quarter of fiscal 2002, the Company's results include a pretax charge of \$4.0 million in connection with the closure of an additional plant. In the third and fourth quarters of 2002, the Company recorded pre-tax benefits of \$1.6 million and \$0.8 million, respectively, associated with the reversal of aforementioned pretax charges related to plant closures. Also in the third quarter of 2002, the Company recognized a one-time tax benefit of \$1.4 million.

Our quarterly results of operations have been, and will likely continue to be, subject to significant fluctuations due to a variety of factors, a number of which are beyond the Company's control.

Liquidity and Capital Resources

The Company has historically financed its operations and capital requirements through cash flow from operating activities, long-term loans, lease financing and borrowings under domestic and international short-term lines of credit. In fiscal 2000, Entegris raised capital via an initial public offering.

31

Operating activities. Cash flow provided by operating activities totaled \$32.9 million, \$80.0 million and \$64.1 million in fiscal 2002, 2001 and 2000, respectively. The decline in fiscal 2002 compared to the two previous years mainly reflects net earnings in 2002. In 2002, noncash charges, such as depreciation and amortization of \$28.2 million, as well as decreases in inventory of \$8.4 million, accounts receivable of \$3.8 million and refundable income taxes of \$7.2 million, partly offset by a \$21.7 million reduction in accounts payable and accruals, accounted for the cash flow provided by operations. Working capital stood at \$177.1 million at August 31, 2002, including \$74.8 million in cash and cash equivalents, and short-term investments of \$44.6 million.

Investing activities. Cash flow used in investing activities totaled \$38.3 million, \$110.1 million and \$15.8 million in 2002, 2001 and 2000, respectively. Acquisition of property and equipment totaled \$19.6 million, \$24.2 million and \$21.4 million in 2002, 2001 and 2000, respectively. Significant capital expenditures in 2002 included the expansion of the Company's Gilroy, California facility, site of its cleaning service business and expenditures for manufacturing equipment and information systems.

The Company expects capital expenditures of approximately \$25 million during fiscal 2003, consisting mainly of spending on manufacturing equipment, tooling and information systems.

Acquisition of businesses totaled \$8.9 million and \$43.0 million in 2002 and 2001, respectively. The Company completed two transactions in 2002. In August 2002, the Company acquired assets related to products serving the semiconductor tape and reel market for \$2.0 million. Identifiable intangible assets, consisting principally of proprietary knowledge, of approximately \$1.8 million were recorded in connection with the transaction. In February 2002, the Company purchased the 49% minority interests held in its Fluoroware Valqua Japan K.K. and Nippon Fluoroware K.K subsidiaries for total consideration of \$5.2 million. Identifiable intangible assets of approximately \$1.3 million were recorded in connection with the transaction.

The Company made purchases, net of maturities, of \$8.0 million and \$36.6 million of debt securities classified as short-term investments in 2002 and 2001, respectively. Short-term investments stood at \$44.6 million at August 31, 2002.

Financing activities. Cash provided by financing activities totaled \$5.6 million, \$2.0 million and \$38.3 million in fiscal 2002, 2001 and 2000, respectively.

The Company recorded proceeds of \$5.5 million and \$4.7 million in 2002 and 2001, respectively, in connection with common shares issued under the Company's stock option and stock purchase plans.

The Company made payments on short-term borrowings and long-term debt totaled \$13.7 million in fiscal 2002, while proceeds from borrowings were \$13.8 million.

On July 11, 2000, Entegris completed a registered underwritten initial public offering (IPO), receiving net proceeds of \$99.0 million after underwriting and issuance costs. A portion of the IPO proceeds was used to eliminate domestic short-term borrowings and retire \$42 million in long-term debt and capital lease obligations.

The Company repurchased common shares for \$0.7 million and \$10.4 million in 2001

and 2000, respectively. These shares were acquired in connection with the redemption of common stock from the Company's Employee Stock Ownership Plan and, in 2001, the repurchase of 55,000 common shares as part of a 500,000 share repurchase authorization made by the Company's board of directors in the first quarter of fiscal 2001.

As of August 31, 2002, the Company's sources of available funds comprised \$74.8 million in cash and cash equivalents, \$44.6 million in short-term investments and various credit facilities. Entegris has unsecured revolving credit commitments with two commercial banks with aggregate borrowing capacity of \$20 million, with no borrowings outstanding at August 31, 2002 and lines of credit with seven international banks that provide for borrowings of currencies for our overseas subsidiaries, equivalent to an aggregate \$13.4 million. Borrowings outstanding on these lines of credit were \$8.9 million at August 31, 2002. The company also owed \$0.5 million in other short-term bank borrowings not subject to formal credit agreements at August 31, 2002.

At August 31, 2002, the Company's shareholders' equity stood at \$322.1 million. Book value per share was \$4.53, up from \$4.48 per share at the end of fiscal 2001. The impact of net earnings and proceeds from the issuance of

32

shares issued under the Company's stock option and stock purchase plans was offset partly by a \$4.2 million change in accumulated comprehensive income (loss) and the effect of additional common shares outstanding.

The Company believes that its cash and cash equivalents, short-term investments, cash flow from operations and available credit facilities will be sufficient to meet its working capital and capital expenditure requirements for the next 12 months. However, future growth, including potential acquisitions, may require the Company to raise capital through additional equity or debt financing. There can be no assurance that any such financing would be available on commercially acceptable terms.

Recently Issued Accounting Pronouncements

In October 2001, the FASB issued SFAS No. 144, Accounting for the Impairment or Disposal of Long-Lived Assets, which addresses financial accounting and reporting for the impairment or disposal of long-lived assets. While SFAS No. 144 supersedes SFAS No. 121, it retains many of the fundamental provisions of that Statement. SFAS No. 144 becomes effective for the Company at the beginning of its fiscal year ended August 30, 2003. Adoption is not expected to have an impact on the Company's results of operations or financial position.

In June 2002, the FASB issued SFAS No. 146, Accounting for Costs Associated with Exit or Disposal Activities," which addresses accounting for restructuring and similar costs. SFAS No. 146 supercedes previous accounting guidance and is required for restructuring activities initiated after December 31, 2002. SFAS No. 146 requires the recognition of the liability for costs associated with exit or disposal activities as incurred, whereas previous accounting guidance required that a liability be recorded when the Company committed to an exit plan.

Quantitative and Qualitative Disclosure About Market Risks

Entegris's principal market risks are sensitivities to interest rates and foreign currency exchange rates. The Company's current exposure to interest rate fluctuations is not significant. Most of its outstanding debt at August 31, 2002 carried fixed rates of interest. The Company's cash equivalents and short-term investments are debt instruments with maturities of 12 months or less. A 10% change in interest rates would potentially increase or decrease net income by approximately \$0.8 million.

The Company uses derivative financial instruments to manage foreign currency exchange rate risk associated with the sale of products in currencies other than the U.S. dollar. At August 31, 2002 the company was party to forward contracts with notional value of \$1.7 million. The cash flows and earnings of foreign-based operations are also subject to fluctuations in foreign exchange rates. A hypothetical 10% change in the foreign currency exchange rates would potentially increase or decrease net income by approximately \$1 million.

The Company's investment in Metron common stock is accounted for as an available-for-sale security. The company is exposed to fluctuations in the price of Metron stock. A 25% adverse change in Metron's per share price would result in an approximate \$1.1 million decrease in the fair value of the Company's investment as of August 31, 2002.

Impact of Inflation

The Company's financial statements are prepared on a historical cost basis, which does not completely account for the effects of inflation. Material and labor expenses are the Company's primary costs. The cost of polymers, its primary raw material, was essentially unchanged from one year ago. Entegris expects the cost of resins to remain stable in the foreseeable future. Labor costs, including taxes and fringe benefits, rose modestly in fiscal 2002. Moderate increases also can be reasonably anticipated for fiscal 2003.

ITEM 7A. QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK

The information required by this item can be found under the subcaption "Quantitative and Qualitative Disclosure About Market Risks" of "Management's Discussion and Analysis of Financial Condition and Results of Operations" in Item 7.

ENTEGRIS, INC. NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

(1) SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

Principles of Consolidation and Basis of Presentation Entegris, Inc. (the Company) is a leading provider of materials integrity management solutions that protect and transport the critical materials used in the semiconductor and other high technology industries. The accompanying consolidated financial statements include the accounts of the Company and its majority-owned subsidiaries. Intercompany profits, transactions and balances have been eliminated in consolidation. Certain amounts reported in previous years have been reclassified to conform to the current year's presentation.

The Company's fiscal year is a 52-week or 53-week period ending on the last Saturday in August. Fiscal years 2002, 2001 and 2000 ended on August 31, 2002, August 25, 2001 and August 26, 2000, respectively, and are identified herein as 2002, 2001 and 2000.

Cash, Cash Equivalents and Short-term Investments Cash and cash equivalents include cash on hand and highly liquid debt securities with original maturities of three months or less, which are valued at cost.

Debt securities with original maturities greater than three months and remaining maturities of less than one year are classified and accounted for as held-to-maturity and recorded at amortized cost, and are included in short-term investments. The fair market value of short-term investments is essentially the same as amortized cost.

Inventories Inventories are stated at the lower of cost or market. Cost is determined by the first-in, first-out (FIFO) method.

Property, Plant, and Equipment Property, plant and equipment are carried at cost and are depreciated principally on the straight-line method over the estimated useful lives of the assets. When assets are retired or disposed of, the cost and related accumulated depreciation are removed from the accounts, and gains or losses are recognized in the same period. Maintenance and repairs are expensed as incurred; significant additions and improvements are capitalized. Property, plant and equipment are reviewed for impairment whenever events or changes in circumstances indicate that the carrying amount of an asset may not be recoverable based on estimated future undiscounted cash flows. The Company recorded asset write-offs on molds and equipment of approximately \$1.1 million,

\$3.5 million and \$5.9 million for 2002, 2001 and 2000, respectively. All impairment losses are included in the Company's cost of sales.

Investments Substantially all of the Company's equity investments are marketable and are classified as available-for-sale. Accordingly, such securities are recorded at fair value, with any unrealized holding gains and losses, net of taxes, excluded from income, and recognized as a separate component of shareholders' equity. All equity investments are periodically reviewed to determine if declines in fair value below cost basis are other-than-temporary. Significant and sustained decreases in quoted market prices and a series of historical and projected operating losses by investees are considered in the review. If the decline in fair value is determined to be other-than-temporary, an impairment loss is recorded and the investment written down to a new cost basis. The Company's nonmarketable investments are recorded at cost.

Goodwill and Other Intangible Assets Goodwill is the excess of the purchase price over the fair value of net assets of acquired businesses. Upon the adoption of Statement of Financial Accounting Standards (SFAS) No. 142, Goodwill and Other Intangible Assets in the first quarter of 2002, the Company no longer amortizes goodwill, but instead is required to test for impairment at least annually. See Note 6 for the pro forma effects of adopting this standard.

Other intangible assets include, among other items, patents and unpatented technology and are amortized using the straight-line method over their respective estimated useful lives of 5 to 17 years. SFAS No. 142 requires that intangible assets with definite useful lives be reviewed for impairment in accordance with SFAS No. 121, Accounting for the Impairment of Long-Lived Assets and for Long-Lived Assets to Be Disposed Of.

Derivative Financial Instruments. Effective August 27, 2000, the Company adopted SFAS No. 133, Accounting for Derivative Instruments and Hedging Activities, which requires companies to record derivatives on the balance sheet as assets or liabilities, measured at fair value. Changes in the fair value of derivatives are recorded each period in current

38

earnings or other comprehensive income, depending on whether the derivative is designated as part of a hedge transaction and, if it is, depending on the type of hedge transaction. Gains and losses on derivative instruments that are reported in other comprehensive income will be recognized in the periods in which earnings are impacted by the variability of the cash flows of the hedged item.

The Company periodically enters into forward foreign currency contracts to reduce exposures relating to rate changes in certain foreign currencies. Certain exposures to credit losses related to counterparty nonperformance exist, however, the Company does not anticipate nonperformance by the counterparties as they are large, well-established financial institutions. None of these derivatives is accounted for as a hedge transaction under the provisions of SFAS No. 133. Accordingly, changes in the fair value of forward foreign currency contracts are recorded in current earnings. The fair values of the Company's derivative financial instruments are based on prices quoted by financial institutions for these instruments. The Company was a party to forward foreign currency contracts with notional amounts of \$1.7 million and \$10.7 million at August 31, 2002 and August 25, 2001, respectively.

Foreign Currency Translation. Except for certain foreign subsidiaries whose functional currency is the United States (U.S.) dollar, assets and liabilities of foreign subsidiaries are translated from foreign currencies into U.S. dollars at current exchange rates. Income statement amounts are translated at the weighted average exchange rates for the year. Gains and losses resulting from foreign currency transactions are included in net income. For certain foreign subsidiaries whose functional currency is the U.S. dollar, currency gains and losses resulting from translation are determined using a combination of current and historical rates and are reported as a component of net income.

Revenue Recognition/Concentration of Risk Revenue and the related cost of sales are generally recognized upon shipment of the products. The Company provides for estimated returns and warranty obligations when the revenue is recorded. The Company sells its products throughout the world primarily to companies in the microelectronics industry. The Company performs continuing credit evaluations of

its customers and generally does not require collateral. Letters of credit may be required from its customers in certain circumstances. The Company maintains an allowance for doubtful accounts which management believes is adequate to cover any losses on trade receivables.

Certain materials included in the Company's products are obtained from a single source or a limited group of suppliers. Although the Company seeks to reduce dependence on those sole and limited source suppliers, the partial or complete loss of these sources could have at least a temporary adverse effect on the Company's results of operations. Furthermore, a significant increase in the price of one or more of these components could adversely affect the Company's results of operations.

Income Taxes Deferred income taxes are provided in amounts sufficient to give effect to temporary differences between financial and tax reporting. The Company accounts for tax credits as reductions of income tax expense in the year in which such credits are allowable for tax purposes. The Company utilizes the asset and liability method for computing its deferred income taxes. Under the asset and liability method, deferred tax assets and liabilities are based on the temporary difference between the financial statement and tax basis of assets and liabilities and the enacted tax rates expected to apply to taxable income in the years in which these temporary differences are expected to be recovered or settled. The effect on deferred tax assets and liabilities of a change in tax rates is recognized in income in the period that includes the enactment date.

Accounting Estimates The preparation of financial statements in conformity with accounting principles generally accepted in the United States requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the financial statements and the reported amounts of revenues and expenses during the reporting period. Actual results could differ from those estimates.

Stock-based Compensation The Company accounts for stock-based compensation under Accounting Principles Board (APB) Opinion No. 25, Accounting for Stock Issued to Employees. APB No. 25 requires compensation cost to be recorded on the date of the grant only if the current market price of the underlying stock exceeds the exercise price. The Company has adopted the disclosure-only provisions of SFAS No. 123, Accounting for Stock-based Compensation.

Comprehensive Income (Loss) Comprehensive income (loss) represents the change in shareholders' equity resulting from other than shareholder investments and distributions. The Company's foreign currency translation

39

adjustments and unrealized gains and losses on marketable securities are included in accumulated comprehensive income.

Recent Accounting Pronouncements In October 2001, the FASB issued SFAS No. 144, Accounting for the Impairment or Disposal of Long-Lived Assets, which addresses financial accounting and reporting for the impairment or disposal of long-lived assets. While SFAS No. 144 supersedes SFAS No. 121, it retains many of the fundamental provisions of that Statement. SFAS No. 144 becomes effective for the Company at the beginning of its fiscal year ending August 30, 2003. Adoption is not expected to have an impact on the Company's results of operations or financial position.

In June 2002, the FASB issued SFAS No. 146, Accounting for Costs Associated with Exit or Disposal Activities," which addresses accounting for restructuring and similar costs. SFAS No. 146 supercedes previous accounting guidance and is required for restructuring activities initiated after December 31, 2002. SFAS No. 146 requires the recognition of the liability for costs associated with exit or disposal activities as incurred, whereas previous accounting guidance required that a liability be recorded when the Company committed to an exit plan.

(2) ACQUISITIONS

The Company completed two transactions in 2002. In August 2002, the Company acquired assets related to products serving the semiconductor tape and reel market for \$2.0 million. Identifiable intangible assets, consisting principally

of proprietary knowledge, of approximately \$1.8 million was recorded in connection with the transaction. In February 2002, the Company purchased the 49% minority interests held in its Fluoroware Valqua Japan K.K. and Nippon Fluoroware K.K subsidiaries for total consideration of \$5.1 million. Identifiable intangible assets of approximately \$1.3 million were recorded in connection with the transaction.

The Company completed four acquisitions in fiscal 2001. In March 2001, the Company acquired the fluid handling component product line of Nisso Engineering Co., Ltd. a Japanese company for \$10.4 million. Patents and goodwill of approximately \$2.3 million and \$8.0 million, respectively, were recorded in connection with the transaction. In May 2001, the Company completed its acquisition of 100% of the common stock of NT International, which designs and manufactures patented ultrahigh purity flow and pressure measurement sensors and controllers, for a cash payment of \$27.5 million. Identifiable intangible assets, including patents, and goodwill of approximately \$18.5 million and \$12.1 million, respectively, were recorded in connection with the transaction. In the fourth quarter of fiscal 2001, the Company completed the acquisition of 100% of the common stock of Atcor Corporation and the operating assets and liabilities of Critical Clean Solutions, Inc., which provide precision cleaning systems, products and services to the semiconductor industry, for consideration totaling \$17.8 million, including cash payments of \$16.0 million and \$1.8 million, payable in common stock, in contingent consideration recorded in 2002. Identifiable intangible assets and goodwill of approximately \$7.6 million and \$7.5 million, respectively, were recorded in connection with the transactions.

The following table summarizes the estimated fair value of the assets acquired and liabilities assumed at the dates of acquisition, as determined by third-party valuations of certain tangible and intangible assets.

(In thousands)	Nisso Engineering	NT International	Atcor Corporation	Critical Clean Solutions
Current assets	\$ 678	\$ 1,292	\$ 6,338	\$ 373
Property and equipment	50	661	2,086	5,862
Intangible assets	2,250	18,490	7,578	--
Goodwill	8,051	12,062	7,544	--
Deferred tax assets	--	2,433	--	--
Other assets	38	--	507	--
Total assets acquired	11,067	34,938	24,053	6,235
Current liabilities	573	590	4,103	1,464
Long-term debt	119	--	184	3,481
Deferred tax liabilities	--	6,848	3,300	--
Total liabilities	692	7,438	7,587	4,945
Net assets acquired	\$10,375	\$27,500	\$16,466	\$1,290

Each of the above transactions was accounted for by the purchase method. Accordingly, the Company's consolidated financial statements include the net assets and results of operations from the dates of acquisition. The following table provides Company results as if the acquisitions occurred at the beginning of each period presented.

(In thousands, except per share data)	2001		2000	
	As reported	Pro forma	As reported	Pro forma
Net sales	\$342,444	\$366,827	\$343,465	\$368,041
Net income	38,616	36,278	47,933	44,396
Basic earnings (loss) per share	0.56	0.53	(0.02)	(0.10)
Diluted earnings (loss) per share	0.53	0.50	(0.02)	(0.10)

In October 1999, the Company acquired the assets of a polymer machining business located in Upland, California for \$2.7 million. The acquisition was accounted for under the purchase method of accounting. The excess of the purchase price over net assets acquired was \$1.1 million and was allocated to goodwill.

(3) INVENTORIES

Inventories consist of the following:

(In thousands)	2002	2001
Raw materials	\$13,015	\$15,167
Work-in-process	2,163	1,451
Finished goods	23,216	29,971
Supplies	465	613
	\$38,859	\$47,202

(4) PROPERTY, PLANT AND EQUIPMENT

Property, plant, and equipment consists of the following:

(In thousands)	2002	2001	Estimated Useful Lives
Land	\$ 10,811	\$ 10,112	
Buildings and improvements	60,928	59,502	5-35
Manufacturing equipment	78,647	79,731	5-10
Molds	65,556	61,683	3-5
Office furniture and equipment	47,411	42,037	3-8
	263,353	253,065	
Less accumulated depreciation	161,249	143,934	
	\$102,104	\$109,131	

Depreciation expense was \$24.4 million, \$22.0 million and \$25.3 million in 2002, 2001 and 2000, respectively.

(5) INVESTMENTS

The Company's investments consist primarily of its equity ownership in its affiliate, Metron Technology N.V. (Metron), a worldwide provider of semiconductor equipment and materials support. Through February 2001, the Company accounted for its investment in Metron using the equity method. In March 2001, the Company surrendered ownership of 1.125 million shares of its investment in Metron Technology N.V. (Metron) in connection with the transaction described in Note 11 under the caption "Nonrecurring charges". As a result, the Company's percentage ownership in Metron decreased to approximately 12%. Accordingly, the Company discontinued application of the equity method to account for its investment in Metron. The Company's remaining investment in Metron is accounted for as an available-for-sale security. At August 31, 2002, the Company owned approximately 1.6 million shares of Metron with a market value of \$4.4 million. At August 31, 2002, the unrealized loss on marketable securities was \$1.9 million, net of tax benefits of \$1.2 million. At August 25, 2001, the unrealized gain on marketable securities was \$2.3 million, net of taxes of \$1.3 million.

(6) INTANGIBLE ASSETS

In July 2001, the Financial Accounting Standards Board issued SFAS No. 142, Goodwill and Other Intangible Assets. Under the provisions of SFAS No.142, goodwill and intangible assets with indefinite lives are not amortized, but

tested for impairment annually, or whenever there is an impairment indicator. Intangible assets with definite useful lives must be amortized over their respective estimated useful lives and reviewed for impairment in accordance with SFAS No. 121, Accounting for the Impairment of Long-Lived Assets and for Long-Lived Assets to Be Disposed Of.

The Company adopted SFAS No. 142 as of August 26, 2001. As required by SFAS 142, the Company performed an assessment of whether there was an indication that goodwill was impaired at the date of adoption. In connection therewith, the Company determined that it consisted of a single reporting unit and determined the Company's fair value and compared it to the Company's carrying amount. As of August 26, 2001, the Company's fair value exceeded its carrying amount. Therefore, there was no indication that goodwill was impaired and the Company did not record any transitional impairment loss. Accordingly, the Company was not required to perform the second step of the transitional impairment test. In the second step, the Company would be required to compare the implied fair value of goodwill, determined by allocating the Company's fair value to all of its assets and liabilities to its carrying amount, both of which would be measured as of the date of adoption.

The following table presents a reconciliation of net income and earnings (loss) per share adjusted for the exclusion of goodwill, net of income taxes:

(In thousands)	2002	2001	2000

Net income:			
Reported net income	\$2,776	\$38,616	\$47,933
Add goodwill amortization, net of tax	-	1,230	669

Adjusted net income	\$2,776	\$39,846	\$48,602
	=====		
	2002	2001	2000

Basic earnings (loss) per share:			
Reported basic earnings (loss) per share	\$0.04	\$0.56	\$ (0.02)
Add goodwill amortization, net of tax	-	0.02	0.02

Adjusted basic earnings per share	\$0.04	\$0.58	\$ -
	=====		
	2002	2001	2000

Diluted earnings (loss) per share:			
Reported diluted earnings (loss) per share	\$0.04	\$0.53	\$ (0.02)
Add goodwill amortization, net of tax	-	0.02	0.02

Adjusted diluted earnings per share	\$0.04	\$0.55	\$ -
	=====		

The changes in carrying amount of goodwill for the years ended August 31, 2002 and August 25, 2001 are as follows:

(In thousands)	2002	2001

Beginning of year	\$30,266	\$ 4,767
Additions to goodwill as a result of acquisitions	1,044	26,729
Amortization expense	-	(1,230)

End of year	\$31,310	\$30,266
	=====	

Additions to goodwill in 2002 included a \$1.8 million addition in connection with contingent consideration related to fiscal 2001 acquisitions, partly offset by a \$0.8 million reduction associated with purchase price allocation adjustments.

Other intangible assets, excluding goodwill, at August 31, 2002 and August 25, 2001 were as follows:

(In thousands)

	Gross carrying amount	Accumulated amortization	Net carrying value
2002			
Patents	\$16,978	\$3,404	\$13,574
Unpatented technology	9,844	1,203	8,641
Employment and noncompete agreements	4,611	759	3,852
Other	5,040	813	4,227
	\$36,473	\$6,179	\$30,294

(In thousands)

	Gross carrying amount	Accumulated amortization	Net carrying value
2001			
Patents	\$14,337	\$1,811	\$12,526
Unpatented technology	9,844	200	9,644
Employment and noncompete agreements	6,211	85	6,126
Other	3,969	628	3,341
	\$34,361	\$2,724	\$31,637

Amortization expense was \$3.7 million, \$2.3 million and \$1.9 million in 2002, 2001 and 2000, respectively.

Estimated amortization expense for the fiscal years 2003 to 2007 and thereafter is \$3.7 million, \$3.7 million, \$3.7 million, \$3.5 million, \$3.1 million and \$12.6 million, respectively.

(7) ACCRUED LIABILITIES

Accrued liabilities consist of the following:

(In thousands)	2002	2001
Payroll and related benefits	\$ 8,446	\$12,515
Employee benefit plans	2,843	4,634
Taxes, other than income taxes	1,036	1,215
Interest	53	44
Donations	65	1,711
Accruals related to nonrecurring charges	160	3,559
Warranty and related	2,198	3,350
Other	5,278	6,602
	\$20,079	\$33,630

(8) LONG-TERM DEBT

Long-term debt consists of the following:

(In thousands)	2002	2001
Stock redemption notes payable in various installments along with interest of 8% and 9% through December 2010	\$ 3,308	\$ 4,427

Commercial loans payable on a monthly basis in principal installments of \$49, with interest ranging from 1.68% to 3.15% and various maturities through September 2015	2,651	3,250
Commercial loan payable on a semiannual basis in principal installments of \$39 and interest ranging from 4.5% to 6% and various maturities through December 2007	1,747	2,122
Small Business Administration loans payable on a monthly basis in principal installments of \$9 and interest ranging from 4.2% to 7.3% and various maturities through October 2020	2,898	2,963
Commercial loan secured by equipment payable on a monthly basis in principal installments of \$40 and interest ranging from 5.0% to 21.0% and various maturities through December 2005	1,109	970
Industrial Revenue Bonds payable on a semiannual basis with principal installments of \$50 through October 2012, and variable interest ranging from 1.45% to 2.60%	1,150	1,250
Private bond with interest of 1.7% and interest payable on a semiannual basis and full principal due in 2008	1,859	-
Other.	113	357
Total	14,835	15,339
Less current maturities	2,144	2,238
	\$12,691	\$13,101

Annual maturities of long-term debt as of August 31, 2002, are as follows:

Fiscal year ending	(In thousands)
2003	\$ 2,144
2004	2,058
2005	1,376
2006	1,095
2007	812
Thereafter	7,350
	\$14,835

The Company's debt agreements require the Company to maintain certain quarterly financial covenants beginning with the quarter ended February 28, 2000.

During the fourth quarter fiscal 2000, the Company retired \$42 million of long-term and capital lease obligations, utilizing a portion of the proceeds raised in the Company's initial public offering. In connection therewith, prepayment costs of \$1.8 million, or \$1.1 million after taxes, were incurred by the Company. This amount is reported in the Consolidated Statements of Operations as "Extraordinary loss on extinguishment of debt, net of taxes".

(9) SHORT-TERM BANK BORROWINGS

The Company has a revolving commitment with two commercial banks for aggregate borrowings of \$20 million with interest at the LIBOR rate (1.8% at August 31, 2002), plus 1.4%. There was no balance outstanding under this commitment at either August 31, 2002 or August 25, 2001.

The Company has entered into line of credit agreements with seven international commercial banks, which provide for aggregate borrowings of 301 thousand euros, 2.5 million Malaysia ringgits and 1.2 billion Japanese yen for its foreign subsidiaries, which is equivalent to \$11.4 million as of August 31, 2002. Interest rates for these facilities are based on a factor of the banks' reference rates and ranged from 1.375% to 9.5% during 2002. Borrowings outstanding under these line of credit agreements at August 31, 2002 and August 25, 2001, were \$8.9 million and \$3.8 million, respectively.

44

The company also owed \$0.5 million in other short-term bank borrowings not subject to formal credit agreements at August 31, 2002.

(10) LEASE COMMITMENTS

As of August 31, 2002, the Company was obligated under noncancellable operating lease agreements for certain equipment and buildings. Future minimum lease payments for noncancellable operating leases with initial or remaining terms in excess of one year are as follows):

Fiscal year ending	(In thousands)
2003	\$2,766
2004	1,792

2005	1,177
2006	787
2007	734
Thereafter	2,193

Total minimum lease payments	\$9,449
=====	

Total rental expense for all equipment and building operating leases was \$4.8 million, \$4.0 million and \$4.9 million in 2002, 2001 and 2000, respectively. See note 21 for related party leases included above.

(11) NONRECURRING CHARGES (REVERSALS)

In the first quarter of 2002, the Company's results included a nonrecurring charge of \$4.0 million in connection with the closure of its Chanhassen, MN plant. The charge included \$1.5 million in termination costs related to a workforce reduction of 230 employees and \$2.3 million for estimated losses for asset impairment.

Operating results in fiscal 2001 included two nonrecurring charges. During the second quarter, the Company recorded a charge of \$8.2 million related to the early termination of a distribution agreement for the Microelectronics Group with its affiliate, Metron Technology N.V. (Metron). Pursuant to the termination agreement, the Company assumed direct sales responsibility for Microelectronics Group product sales in Europe and Asia, and transferred to Metron 1.125 million shares of Metron stock and agreed to make cash payments totaling \$1.75 million over a 15-month period. Entegris also agreed to buy back certain microelectronics product inventory from Metron. The Company and Metron also executed a new distribution agreement for Entegris' Fluid Handling Group products, which now runs through August 31, 2005.

During the third quarter of fiscal 2001, the Company recorded a \$4.9 million charge in connection with the closing of its Castle Rock, Colorado and Munmak, Korea facilities. The charge included \$1.7 million in termination costs related to a workforce reduction of 170 employees and \$1.4 million for estimated losses for asset disposals. In addition, the charge included \$1.8 million for future lease commitments on the Castle Rock facility, the lessor of which is a major shareholder of the Company.

The Company recorded pre-tax benefits of \$1.6 million and \$0.8 million in the third quarter and fourth quarters of 2002, respectively, associated with the reversal of previous accruals made in 2002 and 2001 related to the plant closures described herein. Approximately \$1.0 million of the reversal was associated with the favorable settlement of future lease commitments on the Castle Rock facility, for which the Company had recorded accruals in 2001. Lower than expected impairment costs accounted for approximately \$1.2 million of the reversals.

As of August 31, 2002, \$0.2 million remained outstanding in connection with the aforementioned nonrecurring charges

Other items, net	192	600	179
	\$ (3,373)	\$21,339	\$26,754

At August 31, 2002, there were approximately \$13.2 million of accumulated undistributed earnings of subsidiaries outside the United States that are considered to be reinvested indefinitely. No deferred tax liability has been provided on such earnings. If they were remitted to the Company, applicable U.S. federal and foreign withholding taxes would be substantially offset by available foreign tax credits.

During the years ended August 31, 2002 and August 25, 2001, respectively, \$5.3 million and \$3.4 million was added to additional paid-in capital in accordance with APB No. 25 reflecting the tax difference relating to employee stock option transactions.

The tax effects of temporary differences that give rise to significant portions of the deferred tax assets and deferred tax liabilities at August 31, 2002 and August 25, 2001 are as follows (in thousands):

	2002	2001
Deferred tax assets:		
Accounts receivable	\$ 981	\$ 1,171
Inventory items	2,780	3,519
Accruals not currently deductible for tax purposes	2,772	4,958

Purchased intangible assets	8,625	10,137
Other, net	3,056	5,510
Total deferred tax liabilities	15,802	21,023
Net deferred tax assets (liabilities)	\$ (4,317)	\$ (10,088)

At August 31, 2002, the Company had federal net operating loss carryforwards of approximately \$3.5 million which begin to expire in 2011, state operating loss carryforwards of approximately \$24.1 million, which begin to expire in 2010, foreign net operating loss carryforwards of approximately \$3.3 million, which expire in 2007, foreign tax credit carryforwards of approximately \$1.5 million which expire in 2007, and research tax credit carryforwards of approximately \$0.3 million which begin to expire in 2009. The Company established a valuation allowance of \$1.4 million during 2002 with respect to the foreign net operating loss carryforwards. Realization of the remaining deferred tax assets is dependent on generating sufficient future taxable income and on the future reversal of taxable temporary differences. Although realization is not assured, the Company believes it is more likely than not that the benefit of these deferred assets will be realized.

(15) SHAREHOLDERS' EQUITY

Initial Public Offering In July 2000, the Company completed an initial public offering of 9,890,000 shares of common stock at an offering price of \$11.00 per share. The Company received proceeds of \$99.0 million after

deducting \$7.3 million and \$2.5 million for underwriting and issuance costs, respectively. Net proceeds were to be used for the retirement of debt, working capital and other general corporate purposes.

Stock Split In March 2000 the Company effected a two-for-one stock split of the Company's common stock. In connection with the stock split, the Company's board of directors also approved an increase in the Company's number of authorized common shares from 100,000,000 shares to 200,000,000 shares.

Employee Stock Ownership Plan and Trust Entegris maintains an Employee Stock Ownership Plan and Trust (ESOT). Employer contributions to the ESOT are determined by the board of directors at its discretion. No contributions have been made to the ESOT since 1995.

ESOT shares totaled 11,585,038 and 14,422,366 as of August 31, 2002 and August 25, 2001, respectively. Prior to the company's initial public offering completed in July 2000, the ESOT plan contained a put option, whereby the Company agreed to purchase the vested shares distributed to terminated participants or their estates, at the appraised value of the shares as of the second August 31 following termination, or after the first August 31 upon death, disability, or attainment of age 65. Subsequent to the Company's initial public offering, all distributions will be in the form of Company stock.

Stock Option Plans In August 1999, Entegris, Inc. established the Entegris, Inc. 1999 Long-Term Incentive and Stock Option Plan (the 1999 Plan) and the Entegris, Inc. Outside Directors' Stock Option Plan (the Directors' Plan). The maximum aggregate number of shares that may be granted under the Plans is 14,522,211 and 1,000,000, respectively. The Plans state that the exercise price for these shares shall not be less than 100% of the fair market value of the common stock on the date of grant of such option.

Under the Directors' Plan, each outside director shall automatically be granted an option to purchase 15,000 shares upon the date the individual becomes a director. Annually, each outside director is automatically granted an option to purchase 9,000 shares. Options will be exercisable six months subsequent to the date of grant. The term of the option shall be ten years. The Plan states that the exercise price for these shares shall not be less than 100% of the fair market value of the common stock on the date of grant of such option.

Option activity for the 1999 Plan and the Directors' Plan is summarized as follows:

(Shares in thousands)	2002		2001		2000	
	Number of shares	Option price	Number of Shares	Option price	Number of Shares	Option price
Options outstanding, beginning						
of year	7,071	\$ 4.94	7,307	\$3.78	5,899	\$2.72
Granted	1,747	8.39	1,457	9.17	1,772	7.27
Exercised	(1,222)	3.25	(1,228)	2.46	(106)	2.51
Canceled	(127)	10.05	(465)	6.58	(258)	4.21
Options outstanding, end of year	7,469	\$ 5.94	7,071	\$4.94	7,307	\$3.78
Options exercisable, end of year	4,636	\$ 4.37	4,683	\$3.57	4,618	\$2.70
Options available for grant, end of year	5,498		4,332		2,587	

Options outstanding for the 1999 Plan and the Directors' Plan at August 31, 2002 are summarized as follows:

(Shares in thousands)	Options outstanding			Options exercisable	
	Number outstanding	Remaining contractual life	Weighted-average exercise price	Number exercisable	Weighted-average exercise price
Range of exercise prices					

\$0.96 to \$1.50	478	3.6	\$ 1.24	478	\$ 1.24
\$3.15	2,909	5.3	3.15	2,909	3.15
\$4.22 to \$7.50	727	7.5	5.29	407	4.65
\$7.53 to \$8.25	1,517	9.1	8.02	7	7.53
\$8.38 to \$10.00	1,036	8.4	9.15	417	9.34
\$10.19 to \$15.38	802	8.1	11.33	418	11.11

48

The Company determined pro forma compensation expense under the provisions of SFAS No. 123 using the Black-Scholes pricing model and the following assumptions:

	2002	2001	2000
Expected dividend yield	0%	0%	0%
Expected stock price volatility	77%	72%	90%
Risk-free interest rate	4.50%	5.25%	5.50%
Expected life	10 years	10 years	10 years

Had compensation cost for option grants been determined consistent with SFAS No. 123, the Company's net income, on a pro forma basis, would have been as follows:

(In thousands, except per share data)	2002	2001	2000
Net income, as reported	\$2,776	\$38,616	\$47,933
Pro forma net income	(572)	33,788	45,705
Basic net earnings (loss) per share, as reported	0.04	0.56	(0.02)
Pro forma basic net earnings (loss) per share	(0.01)	0.49	(0.07)
Diluted net earnings (loss) per share, as reported	0.04	0.53	(0.02)
Pro forma diluted net earnings (loss) per share	(0.01)	0.46	(0.07)

The weighted average fair value of options granted during 2002, 2001 and 2000 with exercise prices equal to the market price at the date of grant was \$6.88, \$7.40 and \$6.95 per share, respectively.

Employee Stock Purchase Plan In March 2000, the Company's board of directors adopted, and our shareholders approved in May 2000, the Entegris, Inc. Employee Stock Purchase Plan (ESPP Plan). A total of 4,000,000 common shares were reserved for issuance under the ESPP Plan. The ESPP Plan allows employees to elect, at six-month intervals, to contribute up to 10% of their compensation, subject to certain limitations, to purchase shares of common stock at the lower of 85% of the fair market value on the first day or last day of each six-month period. As of August 31, 2002, 423,097 shares had been issued under the ESPP Plan at a weighted-average price of \$7.48.

(16) PENSION AND 401(k) SAVINGS PLAN

Entegris, Inc. has a defined contribution pension plan covering eligible employees. Contributions under this plan are determined by a formula set forth in the plan agreement. Contributions to this plan were suspended for calendar year 2002. Total pension expense for 2002, 2001 and 2000 related to this plan were \$0.3 million, \$1.6 million and \$1.6 million, respectively. The Company maintains a 401(k) employee savings and profit sharing plan (the Plan) that qualifies as a deferred salary arrangement under Section 401(k) of the Internal Revenue Code. Under the Plans, eligible employees may defer a portion of their pretax wages, up to the Internal Revenue Service annual contribution limit. The Company matches 100% of employees' contributions on the first 3% of eligible wages and 50% of employees' contributions on the next 2% of eligible wages, or a maximum match of 4% of the employee's eligible wages. The board of directors may, at its discretion, declare a profit sharing contribution in addition to the matching contribution, but all contributions are limited to the maximum amount

deductible for federal income tax purposes. The employer profit sharing and matching contribution expense under the Plans was \$0.9 million, \$3.3 million and \$2.4 million in 2002, 2001 and 2000, respectively.

49

(17) EARNINGS (LOSS) PER SHARE (EPS)

Basic EPS is computed by dividing net income (loss) applicable to nonredeemable common stock by the weighted average number of shares of nonredeemable common stock outstanding during each period. Since basic EPS for 2000 represents a loss per share of common stock, the effect of including the incremental shares of common stock from assumed exercise of options and from assumed reclassification of redeemable common stock in EPS computation is anti-dilutive, and, accordingly, basic and diluted EPS are the same. The following table presents a reconciliation of the share amounts used in the computation of basic and diluted earnings (loss) per share:

(In thousands)	2002	2001	2000
Basic earnings (loss) per share--Weighted common shares outstanding	70,358	68,747	43,609
Weighted common shares assumed upon exercise of options	3,812	4,248	--
Diluted earnings (loss) per share	74,170	72,995	43,609

(18) SEGMENT INFORMATION

The Company operates in one segment as it designs, develops, manufactures, markets and sells material management and handling products and services predominantly within the microelectronics industry. All products are sold on a worldwide basis. The following table summarizes total net sales, based upon the country from which sales were made, and property, plant and equipment attributed to significant countries for 2002, 2001 and 2000, respectively):

(In thousands)	2002	2001	2000
Net sales:			
United States	\$160,568	\$249,455	\$252,172
Japan	26,407	45,749	32,659
Germany	9,350	27,735	32,325
Malaysia	22,186	15,057	19,094
Korea	41	3,853	3,862
Singapore	1,279	595	3,353
	\$219,831	\$342,444	\$343,465
Property, plant and equipment:			
United States	\$ 74,085	\$ 78,339	\$ 71,626
Japan	8,424	9,767	10,297
Germany	5,362	5,517	5,625
Malaysia	13,757	14,562	15,466
Taiwan	108	82	--
Korea	38	575	4,719
Singapore	330	289	--
	\$102,104	\$109,131	\$107,733

Net sales to external customers attributable to the United States amounted to \$103.1 million, \$170.9 million and \$179.8 million in 2002, 2001 and 2000, respectively. Net sales to external customers attributable to countries other

than the United States amounted to \$116.7 million, \$171.5 million and \$163.7 million in 2002, 2001 and 2000, respectively. In 2002, 2001 and 2000, no single nonaffiliated customer accounted for 10% or more of net sales.

(19) SUPPLEMENTARY CASH FLOW INFORMATION

Income taxes, net of refunds received	(13,201)	28,460	30,884

50

(20) FAIR VALUE OF FINANCIAL INSTRUMENTS

The carrying amount of cash equivalents, short-term investments and short-term debt approximates fair value due to the short maturity of those instruments. The fair value of long-term debt was estimated using discounted cash flows based on market interest rates for similar instruments approximated its carrying value of \$12.7 million at August 31, 2002.

(21) RELATED-PARTY TRANSACTIONS

Leases Through 2002, the Company leased office space and production facilities under various operating leases from a major shareholder's trust or from entities related to this shareholder. The Company was required to pay for all real estate taxes, utilities and other operating expenses. Rent paid relating to these agreements totaled \$0.3 million, \$0.6 million and \$0.8 million for 2002, 2001 and 2000, respectively. As of August 31, 2002, the Company had no future obligations under any lease agreements with the major shareholder's trust or entities related to the shareholder.

In May 2002, the Company paid \$500,000 as consideration for the early termination and buyout of future lease commitments on the Castle Rock facility, which was leased from the related party, as described in Note 11 under the caption "Nonrecurring charges". In March 2000, the Company entered into an agreement to purchase certain real estate and personal property, which the Company previously leased from the related party. The purchase price of the property, which was purchased on May 1, 2000, was \$2.5 million.

Through December 2000, the Company allocated rental payments to Emplast, a previously owned company, totaling \$0.2 million and \$0.6 million in 2001 and 2000, respectively. In connection with Emplast's purchase of the facility in 2001, the company paid Emplast \$0.3 million to terminate the lease.

Notes Receivable At August 25, 2001, the Company had a \$0.8 million note receivable from a major stockholder's trust, which bore interest at 8.0% per year. The balance due was paid in full in fiscal 2002.

Sales to Minority Shareholder The Company sells products to Marubeni Corporation (Marubeni), a minority shareholder, under a distribution agreement scheduled to expire February 28, 2003. Sales to Marubeni were \$12.5 million, \$17.4 million and \$16.2 million in 2002, 2001 and 2000, respectively. Trade accounts receivable relating to these sales as of August 31, 2002 and August 25, 2001 were \$0.9 million and \$1.0 million, respectively. Also, in February 1997, Marubeni was granted an option to buy 214,942 shares of the Company's common stock with an exercise price of \$5.19 per share. The grant was immediately vested and is exercisable for 10 years.

Metron Technology N.V. As described in Note 5 under the caption "Investments", the Company owned approximately 1.6 million shares of Metron at August 31, 2002. In addition, the Company recorded a charge of \$8.2 million in 2001 related to the early termination of a distribution agreement as described in Note 11 under the caption "Nonrecurring charges". Sales to Metron under current and previous distribution agreements were \$16.3 million, \$85.3 million and \$81.9 million in 2002, 2001 and 2000, respectively. Trade accounts receivable relating to these sales as of August 31, 2002 and August 25, 2001 were \$3.3 million and \$6.1

million, respectively.

(22) COMMITMENTS AND CONTINGENT LIABILITIES

In September 2002, the Company was named as a defendant along with three other companies in an action filed for damages arising from a chemical spill at a customer's facility in January 2000. While the outcome of this matter cannot be predicted with any certainty, based on the information to date, the Company believes that it has adequate insurance to cover any damages assessed against the Company and as such, does not believe that the matter will have a material adverse effect on its financial position, operating results or cash flows.

In addition, from time to time, the Company is a party to various legal proceedings incidental to its normal operating activities. Although it is impossible to predict the outcome of such proceedings, facts currently available indicate that no such claims will result in losses that would have a material adverse effect on the financial condition, results of operations or cash flows of the Company.

INDEPENDENT AUDITORS' REPORT

The Board of Directors and Shareholders
Entegris, Inc.:

We have audited the accompanying consolidated balance sheets of Entegris, Inc. and subsidiaries as of August 31, 2002 and August 25, 2001, and the related consolidated statements of operations, shareholders' equity, and cash flows for each of the years in the three-year period ended August 31, 2002. These consolidated financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on these consolidated financial statements based on our audits.

We conducted our audits in accordance with auditing standards generally accepted in the United States of America. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, the consolidated financial statements referred to above present fairly, in all material respects, the financial position of Entegris, Inc. and subsidiaries as of August 31, 2002 and August 25, 2001, and the results of their operations and their cash flows for each of the years in the three-year

period ended August 31, 2002 in conformity with accounting principles generally accepted in the United States of America.

As discussed in Note 6 to the consolidated financials statements, the Company adopted the provisions of Statement of Financial Accounting Standards No.142, Goodwill and Other Intangible Assets, on August 26, 2001.

The Board of Directors and Shareholders
Entegris, Inc.:

Under the date of October 4, 2002, we reported on the consolidated balance sheets of Entegris, Inc. and subsidiaries as of August 31, 2002 and August 25, 2001, and the related consolidated statements of operations, shareholders' equity and cash flows for each of the fiscal years in the three-year period ended August 31, 2002, as contained herein. Our report refers to a change of accounting for goodwill in fiscal 2002. In connection with our audits of the aforementioned consolidated financial statements, we also have audited the related financial statement schedule as listed in the accompanying index. The financial statement schedule is the responsibility of the Company's management. Our responsibility is to express an opinion on the financial statement schedule based on our audits.

In our opinion, such financial statement schedule, when considered in relation to the basic consolidated financial statements taken as a whole, presents fairly, in all material respects, the information set forth therein.

ITEM 9. CHANGES IN AND DISAGREEMENTS WITH ACCOUNTANTS ON ACCOUNTING AND FINANCIAL DISCLOSURE

None

PART III

Certain information required by Part III is incorporated by reference to the Company's definitive proxy statement for the annual meeting of shareholders to be held on January 21, 2003 and which will be filed with the Securities and Exchange Commission pursuant to Regulation 14A within 120 days after August 31, 2002.

Except for those portions specifically incorporated in this report by reference to our proxy statement for the Annual Meeting of Shareholders to be held on January 21, 2003, no other portions of the proxy statement are deemed to be filed as part of this Report on Form 10-K.

ITEM 10. DIRECTORS AND EXECUTIVE OFFICERS OF THE REGISTRANT

The information concerning the Company's directors and officers required by this item is incorporated by reference to the information under the captions "Election of Directors", "Named Executive Officers" and "Section 16(a) Beneficial Ownership Reporting Compliance" in the Company's proxy statement for the Annual Meeting of Shareholders to be held on January 21, 2003.

ITEM 11. EXECUTIVE COMPENSATION

The information required by this item is incorporated by reference to the information under the captions "Director Compensation" and "Summary Compensation Table" in the Company's proxy statement for the Annual Meeting of Shareholders to be held on January 21, 2003.

ITEM 12. SECURITY OWNERSHIP OF CERTAIN BENEFICIAL OWNERS AND MANAGEMENT

The information required by this item is incorporated by reference to the information under the captions "Security Ownership of Principal Shareholders" and "Security Ownership of Directors and Named Executive Officers" in the Company's proxy statement for the Annual Meeting of Shareholders to be held on January 21, 2003.

ITEM 13. CERTAIN RELATIONSHIPS AND RELATED TRANSACTIONS

The information required by this item is incorporated by reference to the information under the caption "Certain Transactions" in the Company's proxy statement for the Annual Meeting of Shareholders to be held on January 21, 2003.

ITEM 14. CONTROLS AND PROCEDURES

(a) Evaluation of disclosure controls and procedures.

Based on the Company's chief executive officer's and chief financial officer's evaluations of the effectiveness of the Company's disclosure controls and procedures (as defined in the Securities Exchange Act of 1934 Rules 13a-14(c) and 15-d-14(c)) as of a date within 90 days of the filing date of this Annual Report on Form 10-K, they have concluded that as of such date, the Company's disclosure controls and procedures were adequate to ensure that information required to be disclosed by the Company in the reports that it files

or submits under the Securities Exchange Act of 1934 is recorded, processed, summarized and reported, within the time periods specified in the Commission's rules and forms.

(b) Changes in internal controls.

There were no significant changes in the Company's internal controls or in other factors that could significantly affect these controls subsequent to the date of evaluation, nor were there any significant deficiencies or material weaknesses in the Company's internal controls. As a result, no corrective actions were taken.

56

PART IV

ITEM 15. EXHIBITS, FINANCIAL STATEMENT SCHEDULES AND REPORTS ON FORM 8-K

(a) 1. Financial Statements

The Financial Statements required by this item, along with the Independent Auditors' Report, are submitted in a separate section of this report as indicated in the below index:

INDEX TO FINANCIAL STATEMENTS

	Page Number in this Report -----
Consolidated Balance Sheets as of August 31, 2002 and August 25, 2001	34

Entegris, Inc.
Executive Employment Agreement

This Agreement is between Entegris, Inc. (the "Company"), and
_____ ("Executive") and effective as of August 26, 2002.

1. In the event that a Change of Control of the Company occurs, and the Executive is terminated without Cause or there is any material reduction in the Executive's responsibilities, duties, terms of employment or change of location of employment of 50 miles or more without executives agreement, then the Executive is entitled to receive: (i) his base salary and basic benefits (health, life and dental) for 12 months following termination, (ii) a lump-sum payment equal to his/her then current annual bonus target; and (iii) all unvested stock options become immediately vested and exercisable. "Change of Control" means: (A) any merger or asset sale other than one in which at least 51% of the outstanding voting securities of the surviving or acquiring company are owned in the aggregate by the shareholders of the Company immediately before the transaction; or (B) the issuance of securities or other acquisition of Company securities such that any person becomes the beneficial owner of 50% or more of the Company's outstanding securities. "Cause" means: (a) gross dereliction of duties; (b) willful or gross misconduct that harms the Company; (c) willful and material violation of laws applicable to the Company; or (d) embezzlement or theft of Company property.

2. Exclusive Remedy. This Agreement specifies all of Executive's compensation and benefits resulting from actual or constructive termination in connection with a Change In Control. Executive shall not be entitled to any other compensation or benefits from the Company except to the extent provided under any written Company benefit plan, stock option agreement or indemnification agreement, or as may be required under applicable law.

3. Golden Parachute Excise Tax. If the benefits provided for in this Agreement or otherwise payable to Executive constitute "parachute payments" within the meaning of Section 280G of the Code and will be subject to the excise tax imposed by Section 4999 of the Code, then Executive's severance benefits under Section 1 shall be (i) delivered in full, or (ii) delivered as to such lesser extent which would result in no portion of such severance benefits being subject to the Excise Tax, whichever of the foregoing amounts, taking into account the applicable federal, state and local income taxes and the Excise Tax, results in the receipt by Executive on an after-tax basis, of the greatest amount of severance benefits.

4. Assignment. This Agreement shall bind and benefit (a) Executive's heirs, executors and legal representatives upon Executive's death and (b) any successor of the Company. Any such successor of the Company shall be deemed substituted for the Company under the terms of the Agreement for all purposes. "Successor" shall include any person, firm, corporation or other business entity which at any time, whether by purchase, merger or otherwise, directly or indirectly acquires all or substantially all of the assets or business of the Company. Executive has no other right to assign this Agreement and any such attempted assignment is void.

5. Notices. All notices, requests, demands and other communications under this Agreement shall be in writing and shall be deemed given if (i) delivered personally, (ii) one day after being sent by Federal Express or a similar commercial overnight service, or (iii) three days after being mailed by registered or certified mail, return receipt requested, prepaid and addressed to Company at its principal office, attention: Chief Executive Officer, or to Executive at his last principal residence known to the Company, or at such other addresses as the parties may designate by written notice.

6. Severability. In the event that any provision hereof becomes or is declared by a court of competent jurisdiction to be illegal, unenforceable or void, this Agreement shall continue in full force and effect without said provision.

7. Entire Agreement. This Agreement and any proprietary information and invention assignment, stock option, stock purchase or indemnification agreement represent the entire agreement and understanding between the Company and

Executive concerning Executive's employment relationship with the Company.

8. Arbitration and Equitable Relief. (i) Any dispute or controversy arising out of, relating to, or in connection with this Agreement, or the interpretation, validity, construction, performance, breach, or termination thereof shall be settled by arbitration to be held in Minneapolis, Minnesota in accordance with the National Rules for the Resolution of Employment Disputes then in effect of the American Arbitration Association (the "Rules"). The arbitrator may grant injunctions or other relief in such dispute or controversy. The decision of the arbitrator shall be final, conclusive and binding on the parties to the arbitration. Judgment may be entered on the arbitrator's decision in any court having jurisdiction. (ii) The arbitrator shall apply Minnesota law to the merits of any dispute or claim, without reference to rules of conflict of law. The arbitration proceedings shall be governed by federal arbitration law and by the Rules, without reference to state arbitration law. (iii) The Company shall pay the costs and expenses of such arbitration. Each party shall separately pay its counsel fees and expenses. (iv) Executive understands that nothing in this Agreement modifies Executive's at-will status. Either the Company or Executive can terminate the employment relationship at any time, with or without cause.

9. No Oral Modification, Cancellation or Discharge. This Agreement may only be amended, canceled or discharged in writing signed by Executive and the Company.

10. Withholding. The Company shall be entitled to withhold, or cause to be withheld, from payment any amount of withholding taxes required by law with respect to payments made to Executive in connection with his employment hereunder.

11. Governing Law. This Agreement shall be governed by the laws of the state of Minnesota (with the exception of its conflict of laws provisions).

12. Representations. Executive represents that he has had the opportunity to discuss this matter with and obtain advice from his private attorney, has had sufficient time to, and has carefully read and fully understands all the provisions of this Agreement, and is knowingly and voluntarily entering into this Agreement.

CERTIFICATION OF CHIEF EXECUTIVE OFFICER PURSUANT TO SECTION 906
OF THE SARBANES-OXLEY ACT OF 2002
(18 U.S.C. SECTION 1350)

In connection with the Annual Report of Entegris, Inc, a Minnesota corporation (the "Company"), on Form 10-K for the year ending August 31, 2002 as filed with the Securities and Exchange Commission (the "Report"), I, James E. Dauwalter, President and Chief Executive Officer of the Company, certify, pursuant to ss. 906 of the Sarbanes-Oxley Act of 2002 (18 U.S.C. ss. 1350), that to my knowledge:

(1) The Report fully complies with the requirements of section 13(a) or 15(d) of the Securities Exchange Act of 1934; and

(2) The information contained in the Report fairly presents, in all material respects, the financial condition and result of operations of the Company.

CERTIFICATION OF CHIEF EXECUTIVE OFFICER PURSUANT TO SECTION 302 OF THE
SARBANES-OXLEY ACT OF 2002
(18 U.S.C. SECTION 1350)

I, James E. Dauwalter, certify that:

1. I have reviewed this annual report on Form 10-K of Entegris, Inc.;

2. Based on my knowledge, this annual report does not contain any untrue statement of a material fact or omit to state a material fact necessary to make the statements made, in light of the circumstances under which such statements were made, not misleading with respect to the period covered by this annual report;

3. Based on my knowledge, the financial statements, and other financial information included in this annual report, fairly present in all material respects the financial condition, results of operations and cash flows of the registrant as of, and for, the periods presented in this annual report;

4. The registrant's other certifying officer and I are responsible for establishing and maintaining disclosure controls and procedures (as defined in Exchange Act Rules 13a-14 and 15d-14) for the registrant and have:

(a) designed such disclosure controls and procedures to ensure that material information relating to the registrant, including its consolidated subsidiaries, is made known to us by others within those entities, particularly during the period in which this annual report is being prepared;

(b) evaluated the effectiveness of the registrant's disclosure controls and procedures as of a date within 90 days prior to the filing date of this annual report (the "Evaluation Date"); and

(c) presented in this annual report our conclusions about the effectiveness of the disclosure controls and procedures based on our evaluation as of the Evaluation Date;

5. The registrant's other certifying officer and I have disclosed, based on our most recent evaluation, to the registrant's auditors and the audit committee of registrant's board of directors (or persons performing the equivalent function):

(a) all significant deficiencies in the design or operation of internal controls which could adversely affect the registrant's ability to record, process, summarize and report financial data and have identified for the registrant's auditors any material weaknesses in internal controls; and

(b) any fraud, whether or not material, that involves management or other employees who have a significant role in the registrant's internal controls; and

6. The registrant's other certifying officer and I have indicated in this annual report whether there were significant changes in internal controls or in other factors that could significantly affect internal controls subsequent to the date of our most recent evaluation, including any corrective actions with regard to significant deficiencies and material weaknesses.
